

India

Energy efficiency benefits from lighting, residential refrigerators, room air conditioners, distribution transformers and industrial electric motors with the implementation of globally benchmarked minimum energy performance standards

ANNUAL SAVINGS IN 2030								
	Reduce electricity use							
•	→ by over 150.2 TWh							
	→ 7.3% of future national electricity use							
ġġġ	Save electricity worth 10 billion USD							
(\$\(\\$\\\\$\)	equivalent to 69 Power Plants [500MW]							
	Reduce CO ₂ emissions by 170 million tonnes							
CO ₂	equivalent to 90 million Passenger Cars	~~~ ~~~						

PERCENTAGE OF EACH PRODUCT'S SAVINGS TO THE COUNTRY'S TOTAL SAVINGS IN 2030 7 1 31% 13% 16% 38% 2% Residential Room Air Distribution Industrial Lighting Refrigerators Transformer Conditioners **Electric Motor EVEN GREATER SAVINGS POSSIBLE WITH BAT MEPS**

THE PATHWAY TO ENERGY EFFICIENCY

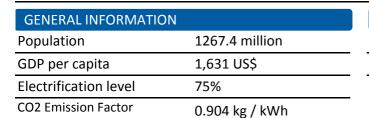

ANNUAL SAVINGS IN 2025 and 2030											
		Lighting				Room Air Conditioners		Distribution Transformers		Industrial Electric Motors	
		2025	2030	2025	2030	2025	2030	2025	2030	2025	2030
	Electricity (TWh)	43.0	46.4	8.8	19.5	24.2	57.4	1.6	3.1	9.9	23.8
666	Electricity Bills (billion US\$)	2.5	2.7	0.5	1.2	1.4	3.4	0.1	0.2	1.1	2.6
CO ₂	CO2 Emissions (million tonnes)	48.5	52.3	10.0	22.0	27.3	64.7	1.8	2.8	11.2	26.8

CUMULATIVE SAVINGS (2020 - 2030)								
		Lighting	Residential Refrigerators	Room Air Conditioners	Distribution Transformers	Industrial Electric Motors		
	Electricity (TWh)	379.65	101.56	287.26	17.73	117.55		
ŠŠŠ	Electricity Bills (billion US\$)	22.40	5.99	16.95	1.05	12.93		
CO ₂	CO2 Emissions (million tonnes)	428.07	114.52	323.90	16.03	132.55		
OTHER BENEFITS IN 2030								
*	Direct GHG emissions reduced by → 50.8 million tonnes							
	Increased grid connection to → 75.1 million households							
ààà	Reduced electri	city subsid	dies by →	1 billior	USD			
1112	Reduced emissi	ons by →	SO ₂ 665.2 tonne	thousand s	NOx 360.2 tonne	thousand es		

Country Specific Data and Input Assumptions

ELECTRICITY MARKET	
Residential Electricity tariff	0.059 US\$ / kWh
Industrial Electricity tariff	0.110 US\$ / kWh
Transmission and	19.83%
distribution loss factor	

ASSUMPTIONS							
Product		Unit Energy Co	onsumption (kWh/yea	Type of Product			
		BAU	MEPS	BAT	Type of Froduct		
4	Lighting	65.7	15.3	8.8	Low incandescent Lamp,3h/day; 14W CFL; 8W LED		
	Residential Refrigerators	352	207	159	2-door top-mount Average size 280 liters		
	Room Air Conditioners	2.607	1,990	1,304	Split unit with 3.5 kW cooling capacity		
7	Distribution Transformers	N/A	SEAD Tier3	SEAD Tier5	three-phase and single-phase liquid- filled and three-phase dry-type		
	Industrial Electric Motors	IE1/IE0	IE3	IE4	3-phase induction motors Ranging from: 0.75 - 7.5 kW; 7.5 - 75 kW;75 - 375 kW		

METHODOLOGY

The analysis uses CLASP's and LBNL's Policy Analysis Modeling System (PAMS) to forecast the impacts from implementing policies that improve the energy efficiency of new household air conditioners and refrigerators. For lighting, electric motors, and distribution transformers individual - models were developed, taking into account country level data, expected GDP growth, and industrialization levels. The savings potential assumes minimum energy performance standards (MEPS) are implemented in 2020 at level equivalent to the present day (2015) best global MEPS that are currently implemented. The graph on page two also shows the savings potential that is possible with the implementation of MEPS in 2020 at level equivalent to the present day best available technology (BAT).

ASSUMPTIONS AND DATA SOURCES

- Population and GDP per capita data (2014) comes from the World Bank.
- Electrification levels come from the International Energy Agency (IEA).
- Market size was determined by data provided by industry partners; UN Comtrade database; household penetration forecasts generated by PAMS from population, climate, and macroeconomic indicators.
- Future electricity consumption was calculated using current consumption figures provided by the IEA and the U.S. Energy Information Administration (EIA).
- Baseline price, unit energy consumption (UEC), appliance lifetime were provided by country representatives (when available); industry partners; and Lawrence Berkeley National Laboratory. The business-as-usual scenario assumes a 1 per cent annual improvement in UEC.
- Electricity tariffs were provided by the IEA; and Internet research.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- CO2 emission factor was comes from the IEA and extrapolations were made for countries lacking data.
- Consumer discount rate was derived from the Human Development Index, United Nations Development Programme (2012).
- The approach of calculating the potential direct emission saving of refrigerators and air conditioners: the typical current mix of refrigerants fillings, leakage rates and end of life emissions in the BAU compared to the best alternative with natural refrigerants (mostly R290 for splits and R600a for Doestic Refrigetaors).
- Additional to the above sources, a questionnaire was used to gather data from country officials.
