

Tajikistan

Energy efficiency benefits from lighting, residential refrigerators, room air conditioners, power and distribution transformers and industrial electric motors with the implementation of globally benchmarked minimum energy performance standards.

ANNUAL SAVINGS IN 2030

Reduce electricity use

→ by over **1 TWh**

→ **4.9%** of future national electricity use

Save electricity worth **20 Million USD**

equivalent to **2 Power Plants [100MW]**

Reduce CO₂ emissions by **20 Thousand Tonnes**

equivalent to **9 Thousand Passenger Cars**

SHARE OF EACH TYPE PRODUCT TO THE COUNTRY'S TOTAL SAVINGS IN 2030

24%

Lighting

30%

Residential Refrigerators

1%

Room Air Conditioners

41%

Transformer

5%

Industrial Electric Motor

EVEN GREATER SAVINGS POSSIBLE WITH BEST AVAILABLE TECHNOLOGY

THE PATHWAY TO ENERGY EFFICIENCY

ANNUAL SAVINGS IN 2025 AND 2030

	 Lighting		 Residential Refrigerators		 Room Air Conditioners		 Transformers		 Industrial Electric Motors	
	2025	2030	2025	2030	2025	2030	2025	2030	2025	2030
 Electricity (GWh)	237.0	240.4	140.6	297.3	2.9	5.9	217.9	409.0	26.1	52.5
 Electricity Bills (thousand US\$)	4,762.9	4,831.4	2,826.1	5,976.0	58.2	119.2	4,379.3	8,220.4	1,146.7	2,309.3
 CO2 Emissions (tonnes)	4,104.7	4,163.7	2,435.5	5,150.1	50.2	102.7	3,268.1	6,134.6	451.4	909.1

CUMULATIVE SAVINGS (2020 - 2030)

	 Lighting		 Residential Refrigerators		 Room Air Conditioners		 Transformers		 Industrial Electric Motors	
	2025	2030	2025	2030	2025	2030	2025	2030	2025	2030
 Electricity (TWh)	2.1	1.6	0.0	0.0	0.0	0.0	2.4	0.3	0.0	0.0
 Electricity Bills (million US\$)	41.3	31.8	0.7	0.7	0.7	0.7	48.6	12.7	0.0	0.0
 CO2 Emissions (thousand tonnes)	35.6	27.4	0.6	0.6	0.6	0.6	36.2	5.0	0.0	0.0

OTHER BENEFITS IN 2030

Direct GHG emissions reduced by → **46 Thousand Tonnes**

ENERGY EFFICIENCY STRATEGY AND NATIONALLY DETERMINED CONTRIBUTION

Law “On Energy Efficiency and energy saving” adopted on September 19 2013, has provisions for introducing mandatory energy audits, establishing procurement procedures that incorporate criteria on energy efficiency, and requirements for energy use in buildings

and household appliances, etc. Decree of the President of April 24, 2009 № 653: additional measures for economical use of energy and energy saving which helped to increase energy efficiency and energy saving in the country. A Technical Committee “Energy saving and energy management” was established in 2012, currently developing standards in the area of buildings, energy-using products, and renewable energy.

Country Nationally Determined Contribution (NDC): A conditional target of reducing greenhouse gas emissions in the Republic of Tajikistan 65- 75% of the 1990 level by 2030, which amounts to 1.2-1.7 tons in CO2 equivalent per capita.

Country Specific Data and Input Assumptions For Tajikistan

GENERAL INFORMATION		ELECTRICITY MARKET	
Population	8.5 million	Residential Electricity tariff	0.020 US\$ / kWh
GDP per capita	2,567 US\$	Industrial Electricity tariff	0.044 US\$ / kWh
Electrification level	100%	Transmission and distribution loss factor	13.41%
CO2 Emission Factor	0.015 kg / kWh		

ASSUMPTIONS

Product	Unit Energy Consumption (kWh/year) or Efficiency Level			Type of Product
	BAU	Policy Scenario	BAT	
Lighting	65.7	15.3	8.8	Low incandescent Lamp,3h/day; 14W CFL; 8W LED
Residential Refrigerators	625	212	139	2-door top-mount Average size 300 liters
Room Air Conditioners	565	461	302	Split unit with 3.5 kW cooling capacity
Transformers	N/A	SEAD Tier3	SEAD Tier5	three-phase and single-phase liquid-filled and three-phase dry-type power and distribution transformer
Industrial Electric Motors	IE1/IE0	IE3	IE4	3-phase induction motors Ranging from: 0.75 - 7.5 kW; 7.5 - 75 kW; 75 - 375 kW

METHODOLOGY

The analysis uses CLASP's and Lawrence Berkeley National Laboratory's Policy Analysis Modeling System (PAMS) to forecast the impacts from implementing policies that improve the energy efficiency of new household air conditioners and refrigerators. For lighting, electric motors, and power and distribution transformers individual - models were developed, taking into account country level data, expected GDP growth, and industrialization levels. The savings potential assumes minimum energy performance standards (MEPS) are implemented in 2020 at level equivalent to the present day (2015) best global MEPS that are currently implemented. The graph on page two also shows the savings potential that is possible with the implementation of MEPS in 2020 at level equivalent to the present day best available technology (BAT).

ASSUMPTIONS AND DATA SOURCES

- Population and GDP per capita data (2014) comes from the World Bank.
- Electrification levels come from the International Energy Agency (IEA).
- Market size was determined by data provided by industry partners; UN Comtrade database; household penetration forecasts generated by PAMS from population, climate, and macroeconomic indicators.
- Future electricity consumption was calculated using current consumption figures provided by the IEA and the U.S. Energy Information Administration (EIA).
- Baseline price, unit energy consumption (UEC), appliance lifetime were provided by country representatives (when available); industry partners; and Lawrence Berkeley National Laboratory. The business-as-usual scenario assumes a 1 per cent annual improvement in UEC.
- Electricity tariffs were provided by the IEA; and Internet research.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- CO2 emission factor came from the IEA and extrapolations were made for countries lacking data.
- Consumer discount rate was derived from the Human Development Index, United Nations Development Programme (2012).
- The approach of calculating the potential direct emission saving of refrigerators and air conditioners: the typical current mix of refrigerants fillings, leakage rates and end of life emissions in the BAU compared to the best alternative with natural refrigerants (mostly R290 for splits and R600a for domestic refrigerators).
- Additional to the above sources, a questionnaire was used to gather data from country officials.
