

China

Product scope	Lighting	Cooling		Equipment	
	All Lighting	Residential Refrigerators	Room Air Conditioners	Industrial Electric Motors	Distribution Transformers

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

ANNUAL SAVINGS IN 2030*

	Reduce electricity use by over 140 TWh which is 2.6% of current national electricity use
	Save electricity worth 11 Billion US\$ equivalent to over 64 Power Plants [500MW each]
	Reduce electricity CO ₂ emissions by over 160 Million tonnes equivalent to 92 Million Passenger Cars

ELECTRICITY SAVINGS OVER TIME*

* Denotes savings are from the Minimum Ambition Scenario.
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

AND EVEN MORE BENEFITS

THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

OTHER BENEFITS ACHIEVED IN 2030*

Reduced electricity subsidies by

640 Million US\$

Reduced direct GHG emissions by

82 Million tonnes

* Denotes savings are from the Minimum Ambition Scenario.

DETAILED BENEFITS

ANNUAL SAVINGS IN 2030 AND 2040*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (TWh)	19	2.8	27	52	45	89	44	97	5.4	12
Electricity Bills (Million US\$)	1.5	220	2,100	4,000	3,500	6,800	3,400	7,500	410	940
CO2 Emissions (Million tonnes)	31	3.3	31	61	53	100	52	110	6.3	14

CUMULATIVE SAVINGS BY 2030 AND 2040*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (TWh)	130	260	140	560	240	950	240	960	28	120
Electricity Bills (Billion US\$)	10	20	11	43	19	73	19	74	2.2	9.1
CO2 Emissions (Million tonnes)	160	310	170	660	290	1,100	280	1,100	33	140

CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040

* Denotes savings are from the Minimum Ambition Scenario.

Country Data and Input Assumptions

GENERAL INFORMATION		ELECTRICITY MARKET	
Population	1.41 Billion	Residential Electricity tariff	0.08 US\$ / kWh
GDP per capita	9,771 US\$		
Electrification level	100.0%	Transmission and distribution loss factor	5.5%
CO2 Emission Factor	1.11 kg / kWh		

ASSUMPTIONS

Product	Unit Energy Consumption (kWh/year) or Efficiency Level						Type of Product
	Business As Usual		Minimum Ambition Scenario		High Ambition Scenario		
Lighting	GSL	15	10W LED	10	7W LED	7	800 lumen light bulb: 1,000 hrs/year
	Linear	108	20W LED	60	16W LED	48	4 foot tube: 3,000 hrs/year
	HID	307	50W LED	219	40W LED	175	Poletop street light: 4,380hrs/year
Cooling	Residential Refrigerators	228	188	148			2-door refrigerator freezer of average size 235 liters
	Room Air Conditioners	891	927	595			A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 3.9 kW
Equipment	Industrial Electric Motors (IEC level)	IE2	IE3	IE4			3-phase induction motors used in the industrial sector
	Distribution Transformers (Model regulation level)	See note	See note	Level 2			Three-phase and single-phase liquid-filled and three-phase dry-type power distribution transformers

Lighting Note: China has existing MEPS for all products covered in the Minimum Ambition Scenario so T5 lamps are also phased out in that scenario for this analysis.

Cooling Note: The minimum ambition scenario MEPS are set at a higher level than the model regulations for both products because China has existing MEPS at that level.

Distribution transformers Note: BAU is based on local MEPS for all types while the minimum ambition scenario level is set as half way between local MEPS and Level 2.

METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

ASSUMPTIONS AND DATA SOURCES

- Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.
- Population (2018 and future forecasts) comes from the UN Population Division.
- GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.
- Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.
- Current total electricity consumption comes from the World Bank and the U.S. Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.
- Residential electricity tariffs are based on IEA data.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- Electrification levels come from the IEA's World Energy Outlook 2018 and the World Bank.
- CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.
- Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.
- The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.
- Additional to the above sources, a questionnaire was used to gather data from country officials.
- In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org

* Denotes savings are from the Minimum Ambition Scenario.
