

Sri Lanka

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

Reduce electricity use by over 1.6 TWh which is 14.2% of current national electricity use Save electricity worth 190 Million US\$ equivalent to over 3 Power Plants [100MW each] Reduce electricity CO₂ emissions by over 1.2 Million tonnes equivalent to 710 Thousand Passenger Cars

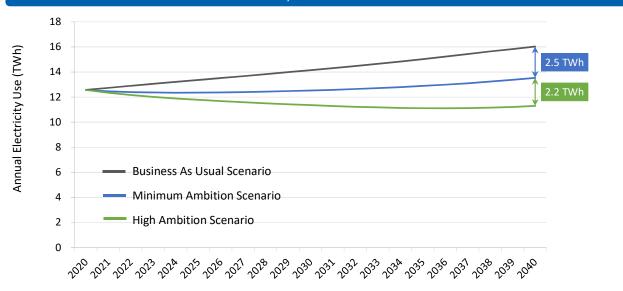

^{*} Denotes savings are from the Minimum Ambition Scenario. U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

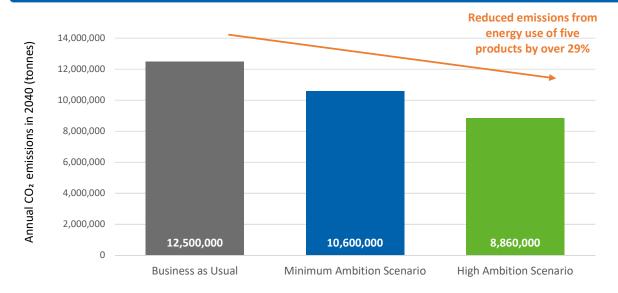

AND EVEN MORE BENEFITS

THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

OTHER BENEFITS ACHIEVED IN 2030*

Reduced electricity subsidies by

Reduced direct GHG emissions by

24 Million US\$

180 Thousand tonnes

^{*} Denotes savings are from the Minimum Ambition Scenario. U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

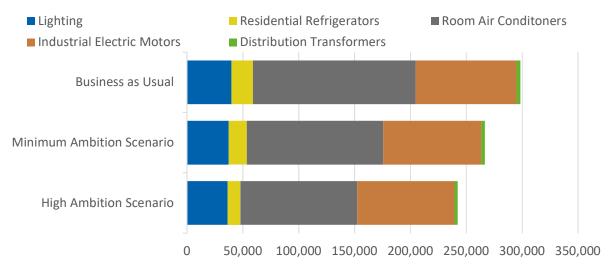

DETAILED BENEFITS

ANNUAL SAVINGS IN 2030 AND 2040*											
		Lighting	(1)	Coo		oling		Equip		ment	(*)
				Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
		2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
7	Electricity (MWh)	140,000	15	150,000	270,000	1,200,000	1,900,000	110,000	260,000	18,000	45,000
"	Electricity Bills (Thousand US\$)	17,000	1.7	17,000	31,000	140,000	220,000	13,000	30,000	2,100	5,200
	CO2 Emissions (Tonnes)	120,000	12	120,000	220,000	940,000	1,500,000	89,000	210,000	15,000	36,000
CUMULATIVE SAVINGS BY 2030 AND 2040*											
		Lighting	(1)		Coc	ling	(A)		Equip	ment	(*)
				Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
		2020	2040	2020	2040	2020	2040	2020	2040	2020	2040

		Lighting	(3)	Cooling			Equip		ment		
				Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
		2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
4	Electricity (GWh)	2,100	2,400	810	3,100	6,600	23,000	600	2,500	96	420
<u>*</u>	Electricity Bills (Million US\$)	250	280	93	360	760	2,700	69	290	11	48
4	CO2 Emissions (Thousand tonnes)	1,700	1,900	640	2,400	5,200	19,000	480	2,000	75	330

CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040

Cumulative electricity use from each product (TWh)

^{*} Denotes savings are from the Minimum Ambition Scenario. U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

Country Data and Input Assumptions

GENERAL INFORMATIO	N	ELECTRICITY MARKET	ELECTRICITY MARKET					
Population	20.9 Million	Residential Electricity tariff	0.12 US\$ / kWh					
GDP per capita 4,102 US\$								
Electrification level 100.0%		Transmission and	11 40/					
CO2 Emission Factor	0.70 kg / kWh	distribution loss factor	11.4%					

ASSUMPTIONS

			Unit Energy Consumption (kWh/year) or Efficiency Level						
Product		Business As Usual		Minimum Ambition Scenario		High Ambition Scenario		Type of Product	
ng		GSL	15W CFL	15	10W LED	10	7W LED	7	800 lumen light bulb: 1,000 hrs/year
Lighting		Linear	36W T8	108	20W LED	60	16W LED	48	4 foot tube: 3,000 hrs/year
Lig.		HID	70W HPS	307	50W LED	219	40W LED	175	Poletop street light: 4,380hrs/year
ling		Residential Refrigerators	342		302		151		2-door refrigerator freezer of average size 250 liters
Cooling	3 1	Room Air Conditioners	2,032		2,214		1,351		A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 5 kW
Equipment		Industrial Electric Motors (IEC level)	IEO		IE2		IE3		3-phase induction motors used in the industrial sector
Equip	7	Distribution Transformers (Model regulation level)	See note		Level 1		Level 2		Three-phase and single-phase liquid- filled and three-phase dry-type power distribution transformers

Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.

METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

ASSUMPTIONS AND DATA SOURCES

- Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.
- Population (2018 and future forecasts) comes from the UN Population Division.
- GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.
- Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.
- Current total electricity consumption comes from the World Bank and the U.S. Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.
- Residential electricity tariffs are based on IEA data.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- Electrification levels come from the IEA's Word Energy Outlook 2018 and the World Bank.
- CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.
- Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.
- The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.
- Additional to the above sources, a questionnaire was used to gather data from country officials.
- In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org
