

# Zimbabwe

Product scope	Lighting	Cooling		Equipment	
	All Lighting	Residential Refrigerators	Room Air Conditioners	Industrial Electric Motors	Distribution Transformers

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

## ANNUAL SAVINGS IN 2030\*

	Reduce electricity use by over <b>280 GWh</b> which is <b>3.2%</b> of current national electricity use
	Save electricity worth <b>28 Million US\$</b> equivalent to over <b>3 Power Plants [20MW each]</b>
	Reduce electricity CO <sub>2</sub> emissions by over <b>120 Thousand tonnes</b> equivalent to <b>68 Thousand Passenger Cars</b>

## ELECTRICITY SAVINGS OVER TIME\*

\* Denotes savings are from the Minimum Ambition Scenario.  
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

# AND EVEN MORE BENEFITS

## THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

## MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

## OTHER BENEFITS ACHIEVED IN 2030\*

Increased grid connection to

**140 Thousand households**

Reduced direct GHG emissions by

**32 Thousand tonnes**

\* Denotes savings are from the Minimum Ambition Scenario.  
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

# DETAILED BENEFITS

## ANNUAL SAVINGS IN 2030 AND 2040\*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	85	57	85	200	38	73	42	100	36	93
Electricity Bills (Million US\$)	8.3	5.6	8.3	20	3.7	7.1	4.1	10	3.6	9.1
CO2 Emissions (Thousand tonnes)	36	24	36	86	16	31	18	43	16	40

## CUMULATIVE SAVINGS BY 2030 AND 2040\*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	700	1,400	420	1,900	200	790	220	940	190	840
Electricity Bills (Million US\$)	69	140	41	190	20	77	21	92	18	82
CO2 Emissions (Thousand tonnes)	300	620	180	820	86	340	92	400	79	360

## CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040

\* Denotes savings are from the Minimum Ambition Scenario.

# Country Data and Input Assumptions

GENERAL INFORMATION		ELECTRICITY MARKET	
Population	16.5 Million	Residential Electricity tariff	0.10 US\$ / kWh
GDP per capita	2,147 US\$		
Electrification level	34.6%	Transmission and distribution loss factor	16.4%
CO2 Emission Factor	0.36 kg / kWh		

## ASSUMPTIONS

Product	Unit Energy Consumption (kWh/year) or Efficiency Level						Type of Product
	Business As Usual		Minimum Ambition Scenario		High Ambition Scenario		
Lighting	GSL	15	10W LED	10	7W LED	7	800 lumen light bulb: 1,000 hrs/year
	Linear	108	20W LED	60	16W LED	48	4 foot tube: 3,000 hrs/year
	HID	307	50W LED	219	40W LED	175	Poletop street light: 4,380hrs/year
Cooling	Residential Refrigerators	340		286		143	2-door refrigerator freezer of average size 210 liters
	Room Air Conditioners	914		1,007		617	A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 5 kW
Equipment	Industrial Electric Motors (IEC level)	IE0		IE2		IE3	3-phase induction motors used in the industrial sector
	Distribution Transformers (Model regulation level)	See note		Level 1		Level 2	Three-phase and single-phase liquid-filled and three-phase dry-type power distribution transformers

Lighting Note: Zimbabwe has existing MEPS for all products covered in the Minimum Ambition scenario so some CFL lamps are also phased out in that scenario for this analysis.  
 Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.

### METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

### ASSUMPTIONS AND DATA SOURCES

- Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.
- Population (2018 and future forecasts) comes from the UN Population Division.
- GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.
- Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.
- Current total electricity consumption comes from the World Bank and the U.S. Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.
- Residential electricity tariffs are based on IEA data.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- Electrification levels come from the IEA's World Energy Outlook 2018 and the World Bank.
- CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.
- Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.
- The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.
- Additional to the above sources, a questionnaire was used to gather data from country officials.
- In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org
