

# Azerbaijan

	Lighting	Cooling		Equipment	
Product scope	All Lighting	Residential Refrigerators	Room Air Conditioners	Industrial Electric Motors	Distribution Transformers

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

## ANNUAL SAVINGS IN 2030\*

	Reduce electricity use by over <b>880 GWh</b> which is <b>4.1%</b> of current national electricity use
	Save electricity worth <b>35 Million US\$</b> equivalent to over <b>2 Power Plants [100MW each]</b>
	Reduce electricity CO <sub>2</sub> emissions by over <b>630 Thousand tonnes</b> equivalent to <b>350 Thousand Passenger Cars</b>

## ELECTRICITY SAVINGS OVER TIME\*

\* Denotes savings are from the Minimum Ambition Scenario.  
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

# AND EVEN MORE BENEFITS

## THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

## MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

## OTHER BENEFITS ACHIEVED IN 2030\*

Reduced electricity subsidies by

**37 Million US\$**

Reduced direct GHG emissions by

**70 Thousand tonnes**

\* Denotes savings are from the Minimum Ambition Scenario.  
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

# DETAILED BENEFITS

## ANNUAL SAVINGS IN 2030 AND 2040\*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	160	10	440	710	180	290	55	120	45	98
Electricity Bills (Thousand US\$)	6.3	420	18,000	28,000	7,400	11,000	2,200	4,900	1,800	3,900
CO2 Emissions (Thousand tonnes)	320	7.5	320	510	130	210	39	88	32	70

## CUMULATIVE SAVINGS BY 2030 AND 2040\*

	Lighting		Cooling				Equipment			
			Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	2,100	2,600	2,400	8,600	1,000	3,600	310	1,200	240	980
Electricity Bills (Million US\$)	85	110	97	350	41	140	12	49	10	39
CO2 Emissions (Thousand tonnes)	1,500	1,900	1,700	6,200	740	2,600	220	870	170	700

## CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040

\* Denotes savings are from the Minimum Ambition Scenario.  
U4E COUNTRY ASSESSMENT, SEPTEMBER 2019

# Country Data and Input Assumptions

GENERAL INFORMATION		ELECTRICITY MARKET	
Population	9.8 Million	Residential Electricity tariff	0.04 US\$ / kWh
GDP per capita	4,721 US\$		
Electrification level	100.0%	Transmission and distribution loss factor	13.6%
CO2 Emission Factor	0.62 kg / kWh		

## ASSUMPTIONS

Product	Unit Energy Consumption (kWh/year) or Efficiency Level						Type of Product
	Business As Usual		Minimum Ambition Scenario		High Ambition Scenario		
Lighting	GSL	15W CFL 15	10W LED 10	7W LED 7	800 lumen light bulb: 1,000 hrs/year		
	Linear	36W T8 108	20W LED 60	16W LED 48	4 foot tube: 3,000 hrs/year		
	HID	70W HPS 307	50W LED 219	40W LED 175	Poletop street light: 4,380hrs/year		
Cooling	Residential Refrigerators	607	307	154	2-door refrigerator freezer of average size 270 liters		
	Room Air Conditioners	945	984	625	A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 6.4 kW		
Equipment	Industrial Electric Motors (IEC level)	IE0	IE2	IE3	3-phase induction motors used in the industrial sector		
	Distribution Transformers (Model regulation level)	See note	Level 1	Level 2	Three-phase and single-phase liquid-filled and three-phase dry-type power distribution transformers		

Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.

### METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

### ASSUMPTIONS AND DATA SOURCES

- Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.
- Population (2018 and future forecasts) comes from the UN Population Division.
- GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.
- Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.
- Current total electricity consumption comes from the World Bank and the U.S. Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.
- Residential electricity tariffs are based on IEA data.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- Electrification levels come from the IEA's World Energy Outlook 2018 and the World Bank.
- CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.
- Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.
- The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.
- Additional to the above sources, a questionnaire was used to gather data from country officials.
- In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org
