Conditioners

Transformers

Electric Motors

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

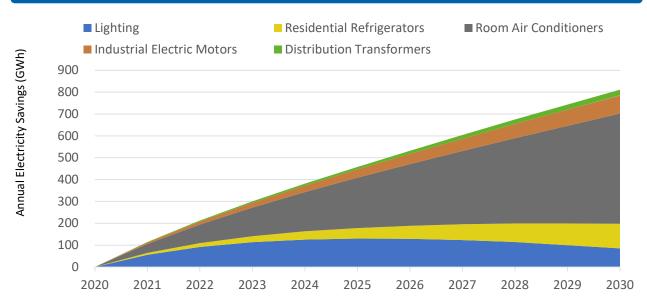

Refrigerators

ANNUAL SAVINGS IN 2030*

Lighting

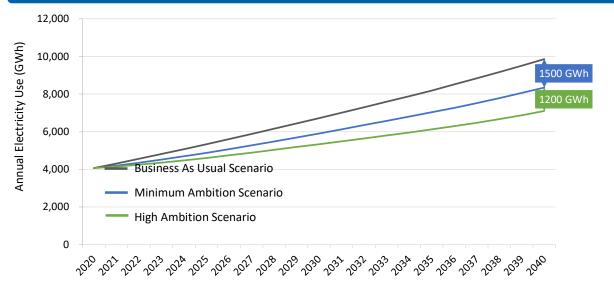

ELECTRICITY SAVINGS OVER TIME*

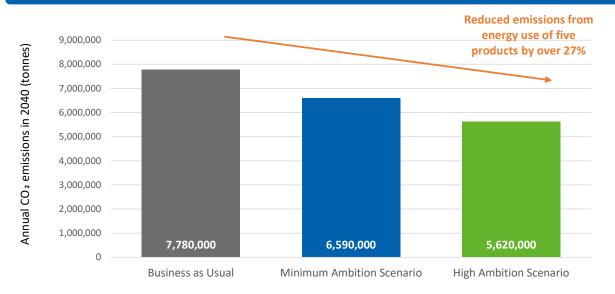

AND EVEN MORE BENEFITS

THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

OTHER BENEFITS ACHIEVED IN 2030*

Increased grid connection to

Reduced cumulative direct GHG emissions by

- 410 Thousand households
 - 38 Thousand tonnes

DETAILED BENEFITS

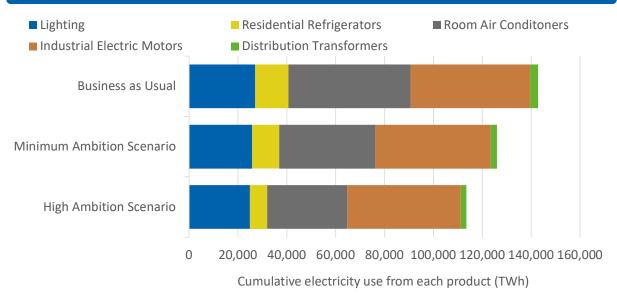

AN	ANNUAL SAVINGS IN 2030 AND 2040*											
Lighting				Cooling 💽					Equip	Equipment		
				Resid Refrige		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers		
		2030	2040	2030	2040	2030	2040	2030	2040	2030	2040	
4	Electricity (GWh)	85	1.2	110	260	500	1,000	83	190	26	65	
<u></u>	Electricity Bills (Thousand US\$)	18,000	260	25,000	56,000	110,000	220,000	18,000	41,000	5,700	14,000	
	CO2 Emissions (Tonnes)	69,000	970	93,000	210,000	410,000	820,000	68,000	150,000	22,000	53,000	

CUMULATIVE SAVINGS BY 2030 AND 2040*

		Lighting		Cooling		ling			Equip		ment 🥳	
					Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
		2030	2040	2030	2040	2030	2040	2030	2040	2030	2040	
4	Electricity (GWh)	1,100	1,300	570	2,500	2,600	11,000	440	1,800	140	600	
	Electricity Bills (Million US\$)	230	270	120	540	570	2,300	95	390	29	130	
	CO2 Emissions (Thousand tonnes)	870	1,000	460	2,000	2,100	8,700	360	1,500	110	490	

CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040

Country Data and Input Assumptions

GENERAL INFORMATION		ELECTRICITY MARKET					
Population 16.2 Million		Residential Electricity tariff	0.22 US\$ / kWh				
GDP per capita 1,512 US\$							
Electrification level 72.5%		Transmission and	23.4%				
CO2 Emission Factor 0.63 kg / kWh		distribution loss factor					

ASSUMPTIONS

Product		Unit Energy Consumption (kWh/ye Business As Minimum Ambition Usual Scenario			mbition	r) or Efficiency High Amb Scenar	oition	Type of Product		
Lighting		GSL Linear HID	15W CFL 36W T8 70W HPS	15 108 307	10W LED 20W LED 50W LED	10 60 219	7W LED 16W LED 40W LED	7 48 175	800 lumen light bulb: 1,000 hrs/year 4 foot tube: 3,000 hrs/year Poletop street light: 4,380hrs/year	
Cooling		Residential Refrigerators	342		259		129		2-door refrigerator freezer of average size 250 liters	
Coo		Room Air Conditioners	3,417	7	2,229 1,661		L	A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 4.2 kW		
Equipment		Industrial Electric Motors (IEC level)	IEO		IE2		IE3		3-phase induction motors used in the industrial sector	
		Distribution Transformers (Model regulation level)		See note		Level 1		2	Three-phase and single-phase liquid- filled and three-phase dry-type powe distribution transformers	

Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.

METHODOLOGY

QIZ

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

ASSUMPTIONS AND DATA SOURCES

Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.

Population (2019 and future forecasts) comes from the UN Population Division.

- GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.
- Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.

Current total electricity consumption comes from the World Bank and the US Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.

- Residential electricity tariffs are based on IEA data.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.
- Electrification levels come from the IEA's Word Energy Outlook 2018 and the World Bank.
- CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.
- Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.
- The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.
- Additional to the above sources, a questionnaire was used to gather data from country officials.
- In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org
