Malawi

Product scope	**Lighting**	**Cooling**		**Equipment**	
	All Lighting	Residential Refrigerators	Room Air Conditioners	Industrial Electric Motors	Distribution Transformers

A summary of the benefits attained from improved energy efficiency through the implementation of Minimum Energy Performance Standards at two levels of ambition (minimum and high). More detailed reports for lighting, cooling and equipment can be downloaded from the United Nations Environment Programme (UNEP) United For Efficiency (U4E) website.

ANNUAL SAVINGS IN 2030*

Reduce electricity use by over **130 GWh** which is **3.6%** of current national electricity use

Save electricity worth **12 Million US$** equivalent to over **1 Power Plant [20MW each]**

Reduce electricity CO_2 emissions by over **42 Thousand tonnes** equivalent to **24 Thousand Passenger Cars**
ELECTRICITY SAVINGS OVER TIME*

Legend: Lighting, Residential Refrigerators, Room Air Conditioners, Industrial Electric Motors, Distribution Transformers

Y-axis: Annual Electricity Savings (GWh); X-axis: 2020–2030

* Denotes savings are from the Minimum Ambition Scenario.

AND EVEN MORE BENEFITS

THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

Annual Electricity Use (GWh)

— Business As Usual Scenario
— Minimum Ambition Scenario
— High Ambition Scenario

130 GWh
150 GWh

MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASED EMISSIONS

Reduced emissions from energy use of five products by over 16%

Annual CO$_2$ emissions in 2040 (tonnes)

Business as Usual	Minimum Ambition Scenario	High Ambition Scenario
516,000	477,000	433,000

OTHER BENEFITS ACHIEVED IN 2030*

🏠 Increased grid connection to **69 Thousand households**

❄ Reduced cumulative direct GHG emissions by **5 Thousand tonnes**

DETAILED BENEFITS

ANNUAL SAVINGS IN 2030 AND 2040*

	Lighting		Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	84	6.7	17	35	13	24	11	26	13	36
Electricity Bills (Thousand US$)	7,500	600	1,500	3,100	1,200	2,100	990	2,400	1,200	3,200
CO_2 Emissions (Thousand tonnes)	26	2.1	5.2	11	4.1	7.4	3.4	8.1	4.2	11

CUMULATIVE SAVINGS BY 2030 AND 2040*

	Lighting		Residential Refrigerators		Room Air Conditioners		Industrial Electric Motors		Distribution Transformers	
	2030	2040	2030	2040	2030	2040	2030	2040	2030	2040
Electricity (GWh)	1,000	1,300	87	360	70	270	58	250	67	320
Electricity Bills (Million US$)	92	120	7.8	32	6.3	24	5.3	22	6.0	28
CO_2 Emissions (Thousand tonnes)	320	410	27	110	22	83	18	77	21	98

CONTRIBUTION TO CUMULATIVE ELECTRICITY USE BY 2040
Legend: ■ Lighting ■ Residential Refrigerators ■ Room Air Conditioners ■ Industrial Electric Motors ■ Distribution Transformers

Categories: Business as Usual, Minimum Ambition Scenario, High Ambition Scenario

Cumulative electricity use from each product (GWh)

* Denotes savings are from the Minimum Ambition Scenario.

Country Data and Input Assumptions

GENERAL INFORMATION

Population	19.2 Million
GDP per capita	389 US$
Electrification level	11.4%
CO2 Emission Factor	0.26 kg / kWh

ELECTRICITY MARKET

Residential Electricity tariff	0.09 US$ / kWh
Transmission and distribution loss factor	18.0%

ASSUMPTIONS

Product		Unit Energy Consumption (kWh/year) or Efficiency Level			Type of Product
		Business As Usual	Minimum Ambition Scenario	High Ambition Scenario	
Lighting	GSL	15W CFL 15	10W LED 10	7W LED 7	800 lumen light bulb: 1,000 hrs/year
	Linear	36W T8 108	20W LED 60	16W LED 48	4 foot tube: 3,000 hrs/year
	HID	70W HPS 307	50W LED 219	40W LED 175	Poletop street light: 4,380hrs/year
Cooling	Residential Refrigerators	263	214	107	2-door refrigerator freezer of average size 118 liters
	Room Air Conditioners	813	526	386	A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 5 kW
Equipment	Industrial Electric Motors (IEC level)	IE0	IE2	IE3	3-phase induction motors used in the industrial sector
	Distribution Transformers (Model regulation level)	See note	Level 1	Level 2	Three-phase and single-phase liquid-filled and three-phase dry-type power distribution transformers

Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.

METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2020 at two different levels of ambition (minimum and high) as shown above.

ASSUMPTIONS AND DATA SOURCES

■ Market size is based on data from industry partners, the UN COMTRADE database and market penetration forecasts generated by U4E Country Savings Assessment Models using data on population, climate, income and other macroeconomic indicators as detailed below.

■ Population (2019 and future forecasts) comes from the UN Population Division.

■ GDP per capita data (2018) comes from the World Bank with future growth forecasts derived from the IPCC's SSP3 scenario.

■ Cooling Degree Days are based on average monthly temperatures from weatherbase.com, degreedays.net or given by wunderground.com.

■ Current total electricity consumption comes from the World Bank and the US Energy Information Administration (EIA) with future forecasts derived from the International Energy Agency's (IEA) World Energy Outlook 2018.

■ Residential electricity tariffs are based on IEA data.

■ Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the IEA.

■ Electrification levels come from the IEA's Word Energy Outlook 2018 and the World Bank.

■ CO2 emission factors come from the IEA and the Institute of Global Environmental Strategies (IGES) and are assumed constant in future years.

■ Product typical characteristics are based on analysis from the UNEP-U4E Model Regulation Guidelines and other data from UNEP-U4E industry partners and technical experts including the US Lawrence Berkeley National Laboratory (LBNL), the International Copper Association (ICA) and GIZ.

■ The approach of calculating the potential direct emissions saving of refrigerators and air conditioners is based on expert input from GIZ and LBNL.

■ Additional to the above sources, a questionnaire was used to gather data from country officials.

■ In a small number of instances, additional data was obtained from internet research or by using proxy data from similar markets.

Further details of the modelling approach and assumptions are available on the U4E website. For more information contact: U4E@un.org

* Denotes savings are from the Minimum Ambition Scenario.
