COUNTRY SAVINGS ASSESSMENT

Honduras

LIGHTING

All Lighting

COOLING

Residential Refrigerators

Commercial Refrigeration

Room Air Conditioners

EQUIPMENT

Industrial Electric Motors

Distribution Transformers

INTRODUCTION

The Country Savings assessments provide a summary of the benefits attained from improved energy efficiency and climate friendly lighting, cooling appliances, and equipment. A market transformation can be obtained through measures such as Minimum Energy Performance Standards (MEPS); product labelling; market monitoring and verification; and financial incentives. For each product, the analysis considers three different scenarios:

- **Business As Usual**: Assumes that no actions are introduced and that the efficiency of products in the market continues to develop in line with historical trends in the absence of regulation.
- **Minimum Ambition:** In which MEPS are introduced in line with the basic requirements of the United Nations Environment Programme (UNEP) United for Efficiency (U4E) Model Regulation Guidelines.
- **High Ambition:** In which more ambitious actions are implemented in line with the highest levels proposed in the Model Regulation Guidelines.

More detailed breakdowns for lighting, cooling appliances and equipment can be found on the UNEP U4E website.

REPORT CONTENTS

OVERVIEW OF BENEFITS

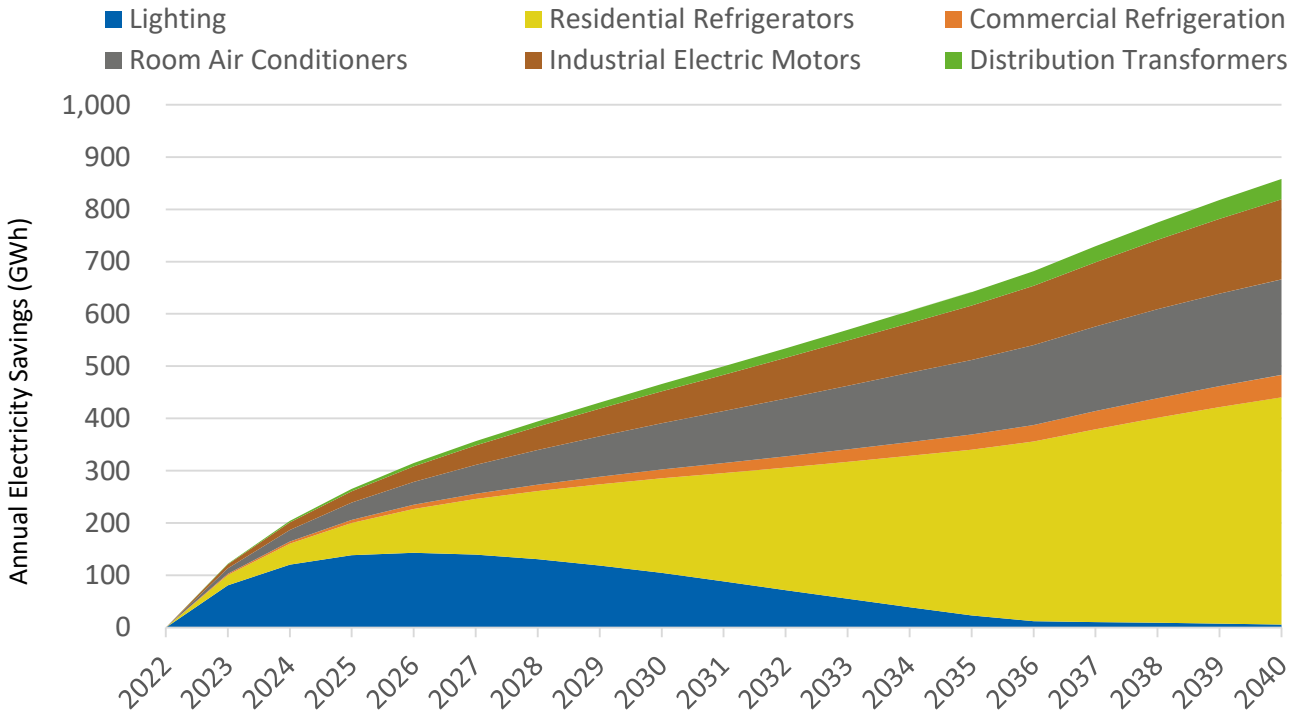
ANNUAL SAVINGS IN 2040*

Reduce electricity use by over **850 GWh** | which is over **10 %** of the total current national electricity use

Save electricity worth over **180 million US$** | equivalent to more than **1 power plant [100MW each]**

Reduce electricity CO_2 emissions by over **850 thousand tonnes** | equivalent to over **470 thousand passenger cars**

ELECTRICITY SAVINGS OVER TIME*



OTHER BENEFITS ACHIEVED IN 2040*

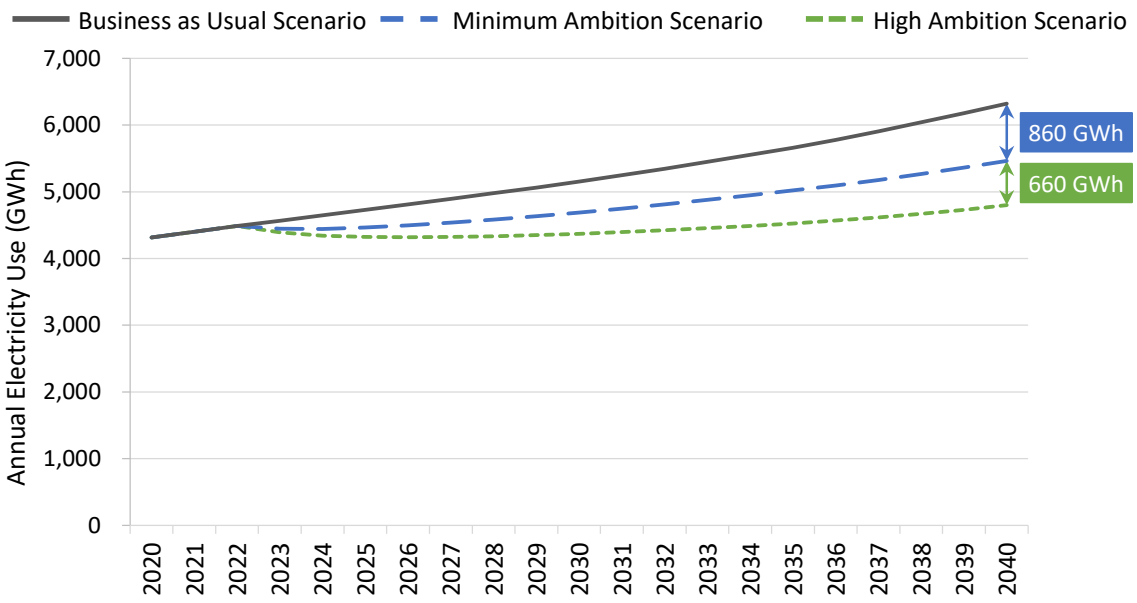
Reduced annual electricity subsidies by **42 million US$**

Reduced cumulative direct GHG emissions by **730 thousand tonnes**

* Savings based on Minimum Ambition Scenario

HIGHER AMBITION TO HELP REACH ENERGY AND CLIMATE GOALS

THE MORE AMBITIOUS THE REGULATION, THE MORE SAVINGS ARE POSSIBLE

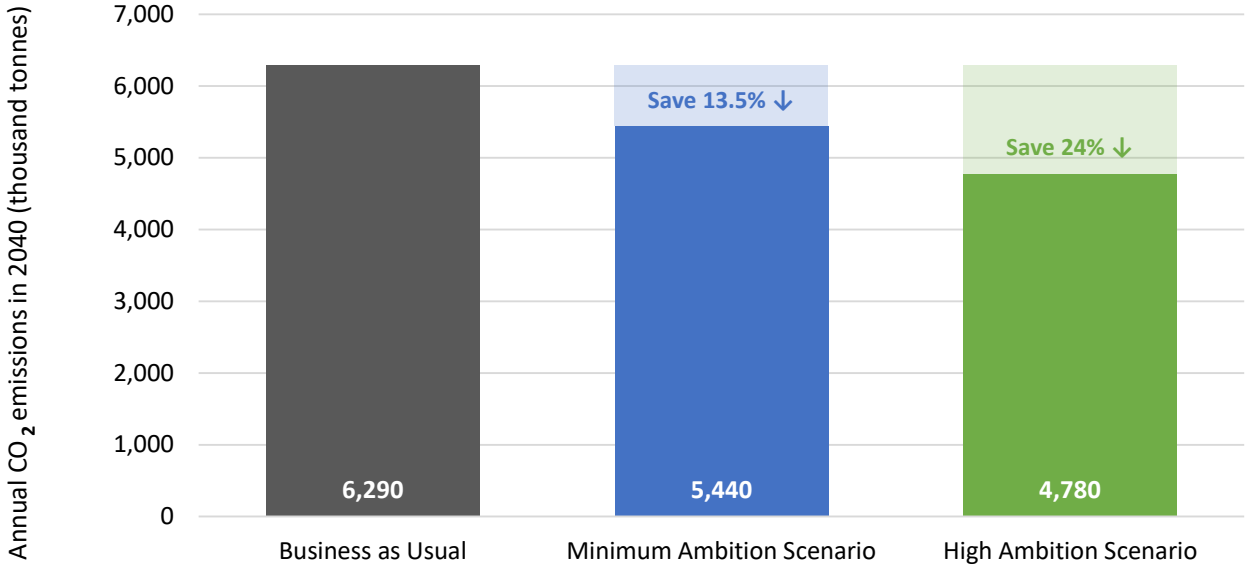


By 2040, electricity consumption is projected to increase by **41%**

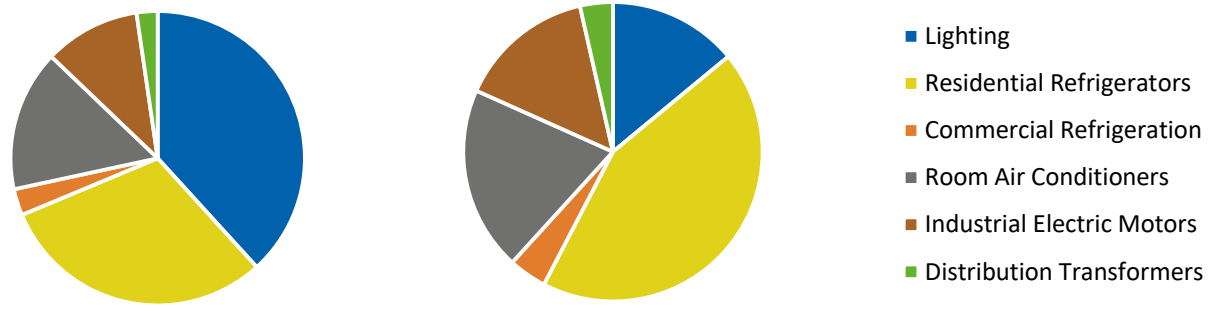
Minimum ambition policies could reduce this increase to **22%**

More ambitious policies could further reduce this increase to **7%**

MEET GLOBAL CLIMATE GOALS BY SIGNIFICANTLY DECREASING EMISSIONS



PRODUCT SHARE OF CO_2 EMISSIONS SAVINGS BY 2030 AND 2040*



Share of 2.5 million tonnes of savings by 2030

Share of 9.2 million tonnes of savings by 2040

* Savings based on Minimum Ambition Scenario

DETAILED BENEFITS AND TYPICAL PRODUCT ASSUMPTIONS

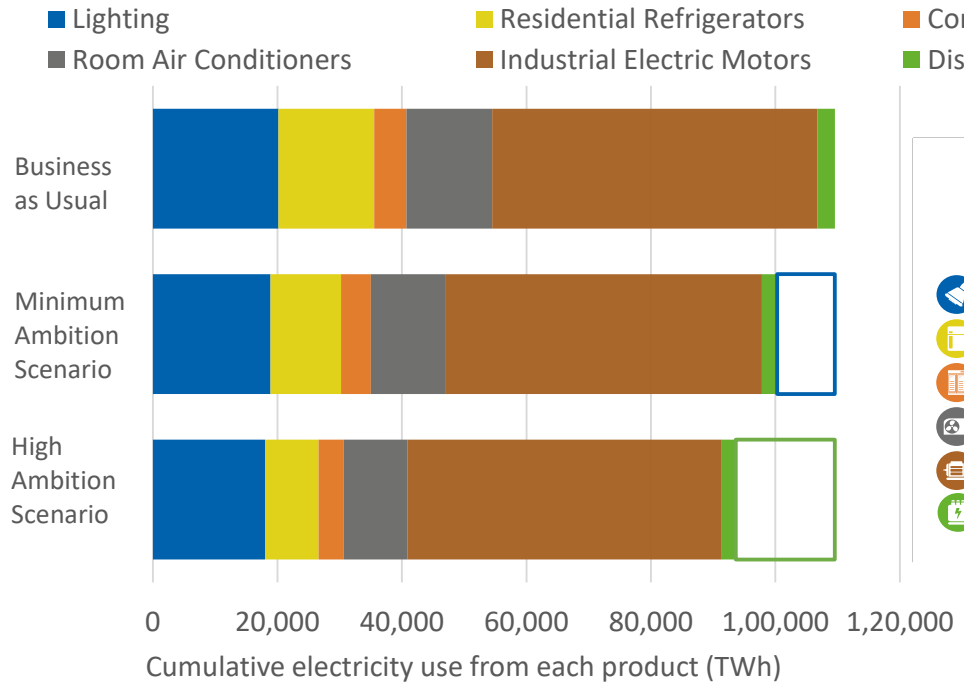
ANNUAL SAVINGS IN 2030 AND 2040*

	2030	2040	2030	2040	2030	2040
Cooling		**Residential Refrigerators**		**Commercial Refrigeration**		**Room Air Conditioners**
Electricity (GWh)	180	430	17	43	89	180
Electricity Bills (million US$)	38	90	3.5	8.9	18	38
CO2 Emissions (thousand tonnes)	180	430	17	42	88	180
Lighting and Equipment		**Lighting**		**Industrial Electric Motors**		**Distribution Transformers**
Electricity (GWh)	100	5.9	61	150	14	39
Electricity Bills (million US$)	22	1.2	13	32	2.9	8.1
CO2 Emissions (thousand tonnes)	100	5.8	61	150	14	39

CUMULATIVE SAVINGS BY 2030 AND 2040*

	2030	2040	2030	2040	2030	2040
Cooling		**Residential Refrigerators**		**Commercial Refrigeration**		**Room Air Conditioners**
Electricity (GWh)	780	4,000	74	380	400	1,800
Electricity Bills (million US$)	160	840	15	79	82	380
CO2 Emissions (thousand tonnes)	770	4,000	74	380	390	1,800
Lighting and Equipment		**Lighting**		**Industrial Electric Motors**		**Distribution Transformers**
Electricity (GWh)	980	1,300	270	1,400	59	330
Electricity Bills (million US$)	200	270	56	280	12	68
CO2 Emissions (thousand tonnes)	970	1,300	270	1,400	59	330

PRODUCT CONTRIBUTION TO CUMULATIVE ELECTRICITY USE & SAVINGS BY 2040



Savings share by 2040:

	Minimum Ambition	High Ambition
	14%	14%
	44%	43%
	4%	7%
	20%	22%
	15%	11%
	4%	3%

* Savings based on Minimum Ambition Scenario

SAVINGS POTENTIAL IN CONTEXT

OTHER OPPORTUNITIES COMPARED WITH MEPS BY 2040

Minimum Energy Performance Standards are developed specifically to improve product efficiency in a market, but other important steps can be taken reduce electricity consumption further.

ROOM AIR CONDITIONERS

- Ensuring products are correctly sized at the time of installation
- Implementing best practice ongoing maintenance practices
- Raising the temperature set point for MEPS-compliant units from 22°C can save between 6-10% per degree up to 27°C
- The use of control systems, sensors and thermal zoning. The savings from AC controls varies greatly depending on the situation but typical savings can be:
  - 28-35% for small offices
  - 32-35% for small retail
  - 24% for supermarkets

Savings compared	
U4E MEPS, depending on stringency, will reduce national electricity use by	13%-25%
Increasing the temperature set point saves	6%-10%/°C
In suitable applications, controls can typically save	24%-35%

LIGHTING

- Occupancy & daylight sensors used in all appropriate settings can typically save up to:
  - 40% in commercial settings
  - 30% in industrial settings
- Dimming controls at off-peak times can typically save as much as:
  - 25% for street lighting

Savings	Compared	
which, by 2040, could save up to:	U4E MEPS, in the minimum and high ambition scenarios, will reduce national electricity use by	6%-11%
116.7 GWh/y		
48 GWh/y		
69.8 GWh/y	In suitable applications, controls can typically save	25%-40%

INDUSTRIAL ELECTRIC MOTORS

- The use of Variable Speed drives in all suitable applications could give an average saving of as much as:
  - 20% when used with pumps
  - 20% when used with fans/blowers
  - 10% when used with compressors
  - 5% when used in mechanical applications

Savings	Compared	
which, by 2040, could save up to:	U4E MEPS, in the minimum and high ambition scenarios, will reduce national electricity use by	2.6%-3.5%
27.1 GWh/y		
36.3 GWh/y		
36.9 GWh/y	In suitable applications, VSDs can typically save	5%-20%
2.7 GWh/y		

DISTRIBUTION TRANSFORMERS

The main savings opportunities for distribution transformers come from management practices such as:

- Ensuring transformers are correctly sized at the time of installation
- Implementing best practice ongoing maintenance and rewinding methods

SMART GRIDS

Using Smart Grids brings other benefits including:

- Reducing projected increases in peak demand by as much as 24%, allowing:
  - reduced capacity overall
  - delays in maintenance/replacement requirements
  - reduced CO_2 emissions from peaking plant
- Allowing improved integration of distributed and renewable generation, and more electric cars both with associated CO_2 emissions benefits

COUNTRY DATA, TYPICAL PRODUCT ASSUMPTIONS AND METHODOLOGY

GENERAL INFORMATION

Population	10.1 Million
GDP per capita	2,444 US$
Electrification level	93.5%
CO_2 emission factor	0.65 kg/kWh

ELECTRICITY MARKET

Residential electricity tariff	0.21 US$/kWh
Transmission and distribution loss factor	34.9%

TYPICAL PRODUCT ASSUMPTIONS

	Product	2022 Unit Energy Consumption (kWh/year) or Efficiency Level: Business As Usual	Minimum Ambition Scenario	High Ambition Scenario	Type of Product
Lighting	*GSL* *Linear* *HID*	*15W CFL* 15 *36W T8* 108 *70W HPS* 307	*10W LED* 10 *20W LED* 60 *50W LED* 219	*7W LED* 7 *16W LED* 48 *40W LED* 175	800 lumen bulb: 1,000 hrs/year 4 foot tube: 3,000 hrs/year Poletop street light: 4,380hrs/year
Cooling	Residential Refrigerators	457	263	131	2-door refrigerator freezer of average size 270 liters
Cooling	Commercial Refrigeration	4,854	4,383	3,310	A market-weighted average of retail display cabinets (both remote and integral), drinks cabinets, storage cabinets, ice-cream freezers, vending machines and scooping cabinets.
Cooling	Room Air Conditioners	1,213	866	632	A mix of 3.5 kW and 7 kW split units with a weighted-average cooling capacity of 4.6 kW
Equipment	Industrial Electric Motors (IEC level)	*IE0*	*IE2*	*IE3*	3-phase induction motors used in the industrial sector
Equipment	Distribution Transformers (Model regulation level)	*See note*	*Level 1*	*Level 2*	Three-phase and single-phase liquid-filled and three-phase dry-type power distribution transformers

■ *Distribution transformers Note: it is assumed that distribution transformers have losses in line with those assumed in the CENELEC harmonization research for the development of the EU standards.*

METHODOLOGY

The analysis uses the UNEP-U4E's Country Savings Assessment Models to estimate the impacts of implementing policies that improve the energy efficiency of each product analysed. The brief methodology is provided below (contact U4E for more information):

- The cooling analyses for refrigerators, commercial refrigeration and air conditioners use a bottom-up stock model approach combined with market data on typical product performance. Future growth is projected based on established relationships between ownership and other known macroeconomic indicators.
- The lighting analysis uses a bottom-up stock model with market data on typical products to estimate current light demand. This is projected forwards in line with IEA estimates of future buildings electricity use. It is then used with an estimate of future average efficacy to calculate electricity consumption. This efficacy is based on assumptions about future trends in lamp switching and product efficacy in different scenarios.
- The equipment models are both top-down estimates. The electricity use of motors is based on its typical relationship to industrial GDP, while distribution transformers are based on the typical capacity required for a total national electricity demand. Electricity use is shared between several typical products and applications based on market data. In both cases, the improvement in average stock efficiency is based on end-of-life stock turnover and new sales.

The savings potential in each scenario assumes Minimum Energy Performance Standards (MEPS) are introduced in 2022 at two different levels of ambition (minimum and high) as shown in the Typical Product Assumptions table above.

Further details of the modelling approach and assumptions are available on the U4E website.
