in Sudan

One of the most important types of energy in our life is electric energy, as electric energy is the mainstay of industry, production and well-being, and it is a measure of the development of nations. And because electrical energy is an important resource, so we must preserve it and use it optimally without waste or waste, so we must learn ways to conserve it. One of the ways to conserve electrical energy is to use low energy consumption devices that consume more energy, and this concept is called electrical and works with the same efficiency as energy efficient devices. Also, one of the ways to conserve energy is to turn off electrical appliances while using energy. All work is done except at the time of need, and this is called the work of the device and its operator. The price depends on the knowledge of the person purchasing these methods and methods Sharing resources, the most important of which is the electricity resource, is one of the noble national concepts, lofty and patriotism, as well as denoting the spirit of FLAI implemented to raise the energy efficiency of five devices, namely: as a start, the project includes energy and oil. Works on gas, evaporative air conditioners (water conditioners), air conditioners. The project works to develop household specifications, fansgardtrightimm. dinbancle at has eveloped that see whole sight abbeing manufacturing thimm. the resources of this giant country. And also

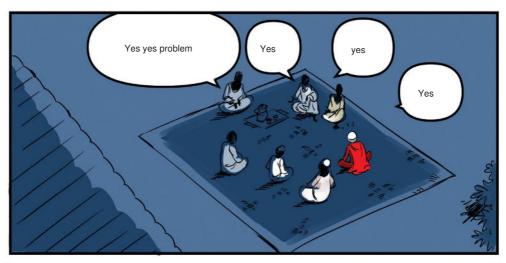

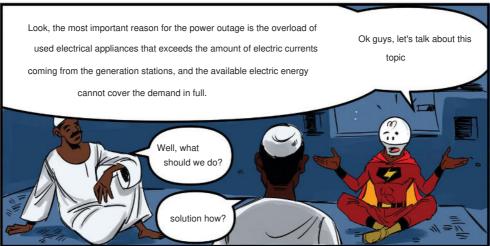

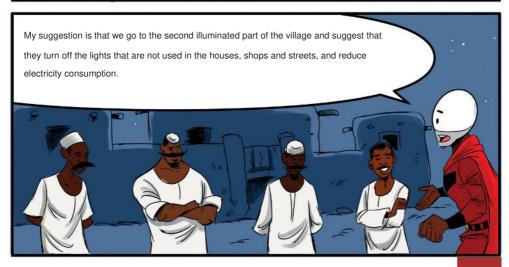

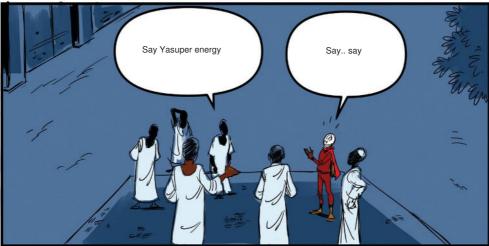

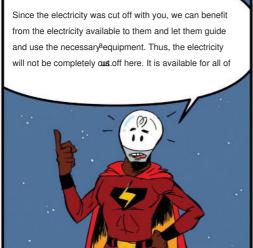

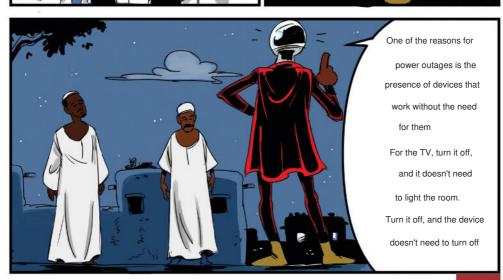

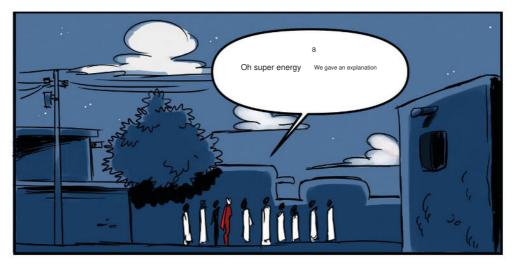

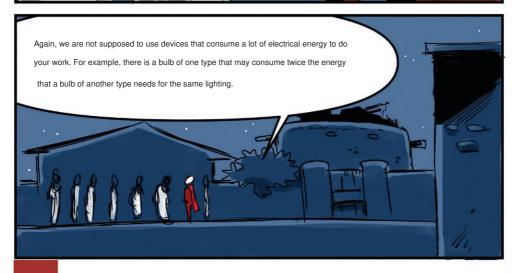

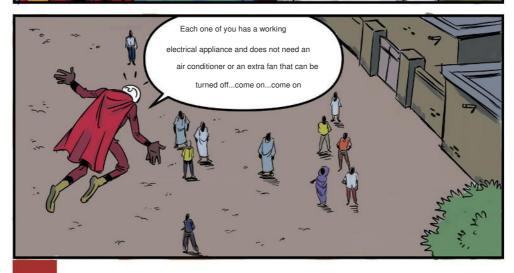

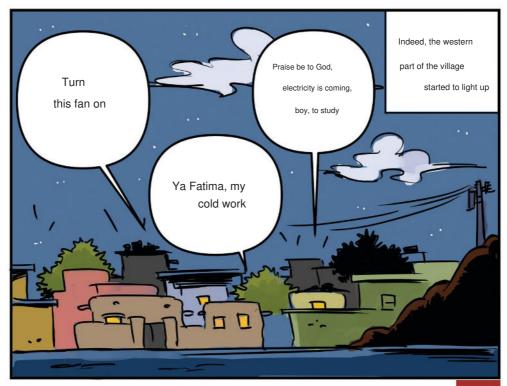

15th Super energy

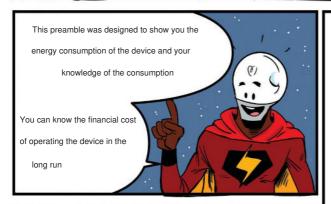

We in Sudan suffer from a shortage of electricity, and we must pay close attention to the concept of energy efficiency

Devices with high energy efficiency are identified in the preamble

The lower the value, the lower the device's consumption, saving electricity. It can be used the bill as well

In operating other devices and reducing power cuts

معلومة X كفاءة

بطاقة كفاءة الطاقة

بطاقة كفاءة الطاقة هي عبارة ملصق يثبت على الجهاز الكهرباني في موضع ظاهر ليرشد المشتري على مستوى إستهلاك الجهاز للطاقة الكهربانية وبالتالي التكلفة المالية السنوية لتشغيل الجهاز مما يمكن المشتري من المقارنة بين الأجهزة من حيث الآداء والتكاليف. يتم تصميم البطاقة بناءا على مواصفة فنية تحدد الحد الأسواء لإستهلاك الجهاز المعني للكهرباء، والمواصفة نفسها يتم وضعها بعد عمل دراسة شاملة للسوق للأجهزة المستهدفة لدراسة المستوى المناسب الذي يتم على أساسه تحديد مستويات الاستهلاك ومنه تصميم البطاقات.

Project for Electrical Appliances and Lighting in Sudan
