

**Training Webinar**

# **Model Regulation Guidelines for Commercial Refrigeration**

***Unfreezing the Savings Potential of Commercial Refrigeration Equipment***

**20 July 2023, 14:00 - 15:30 UTC**

# HOUSEKEEPING

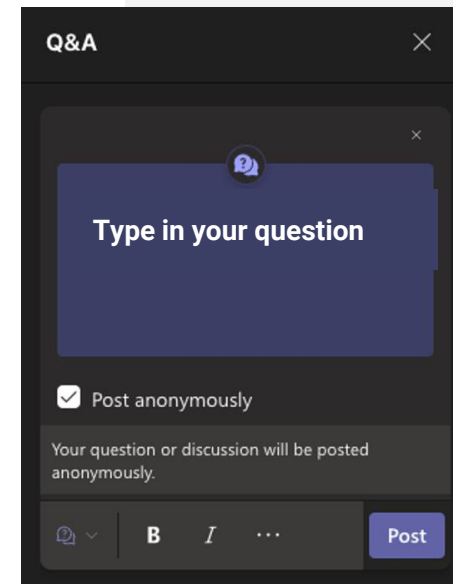

The webinar will be **recorded**. By participating you are giving your consent to this.

Write your comments and questions in the group chat on the top of your screen.

Please use the Q&A option at the top of your screen to add your questions throughout the webinar.

Use the "Raise Hand" button in case you would like to make a comment. We can enable your microphone and camera to allow you to do so.

# SPEAKERS

**Issy McFarlane,  
UK DEFRA**

**Brian Holuj,  
UNEP U4E**

**Dr. Alexandra Maciel,  
Ministry of Mines and  
Energy, Brazil**

**Dr. Nihar Shah,  
LBNL**

**Isaac Saez Alfaro,  
UNIDO Chile**

**Dr Tao Wang,  
Clean Cooling  
Collaborative**

# AGENDA

Welcome, housekeeping and speaker introductions	Marco Duran, UNEP U4E	14:00 – 14:05
Opening: Improving energy efficiency and promoting refrigerant transition	Issy McFarlane, UK DEFRA	14:05 – 14:10
U4E Guidelines role, approach, and progress	Brian Holuj, UNEP U4E	14:10 – 14:15
Commercial Refrigeration Equipment (CRE) Guidelines content and analysis	Dr. Nihar Shah, LBNL	14:15 – 14:35
Brazil's perspective on setting MEPS for CRE and leveraging the U4E Guidelines.	Dr. Alexandra Maciel, Min. of Mines and Energy, Brazil	14:35 – 14:50
Chile's ongoing process on setting MEPS for CRE and leveraging the U4E Guidelines.	Isaac Saez Alfaro, National Consultant Chile, UNIDO	14:50-15:00
Interactive Q&A (responses to written questions submitted via chat)	Moderated by: Marco Duran, UNEP U4E	15:00 – 15:25
Closing reflections on next steps for the Guidelines	Dr. Tao Wang, Clean Cooling Collaborative	15:25 – 15:30

Department  
for Environment  
Food & Rural Affairs

# Opening: Improving Energy Efficiency and Promoting Refrigerant Transition

14:05-14:10 UTC

**Issy McFarlane, UK DEFRA**

# U4E Guidelines Role, Approach, and Progress

14:10-14:15 UTC

**Brian Holuj, UNEP United for Efficiency**

# Saving Opportunities from Energy-efficient and Climate-friendly Commercial Refrigeration Equipment

THE BEST AVAILABLE  
COMMERCIAL REFRIGERATION  
EQUIPMENT USE  
**80% LESS ELECTRICITY**  
THAN COMPARABLE EQUIPMENT  
USING OUTDATED TECHNOLOGY

ELECTRICITY CONSUMPTION FOR COMMERCIAL  
REFRIGERATION COULD INCREASE BY  
**NEARLY 40% BY 2040**  
AS DEMAND FOR THIS EQUIPMENT EXPANDS

MODEST POLICIES CAN REDUCE THIS INCREASE  
TO AS LITTLE AS 13%; MORE STRINGENT POLICIES  
COULD DECREASE ELECTRICITY CONSUMPTION  
TO BELOW CURRENT LEVELS

**ANNUAL  
ELECTRICITY  
SAVINGS**

for commercial refrigeration  
could reach over  
**66 TWh in 2040**

AVOIDING THE  
CONSTRUCTION OF  
**30 LARGE  
POWER PLANTS**

REDUCING CO<sub>2</sub>  
EMISSIONS BY **64  
MILLION TONNES  
ANNUALLY**

SAVING CONSUMERS  
**\$9.5 BILLION**  
ON THEIR  
ELECTRICITY BILLS

THESE SAVINGS ARE NEARLY EQUIVALENT TO THE CURRENT CONSUMPTION OF **IRAQ**

# U4E Model Regulation Guidelines

## Objective

Guidance to help **inform regulatory authorities and policy makers**

Sets a **minimum efficiency floor** to prohibit future sales of inefficient products from the market and sets higher **tiers** consistent with technology and market opportunities.

Over **60+ technical experts** (per product group) from around the world contributed data, analysis, expert reviews

Robust **refrigerant GWP ceiling** for viable, fast action on the Kigali Amendment

Dual focus on **efficiency** and **refrigerants** and widespread deployment

References **global technology and policy trends**

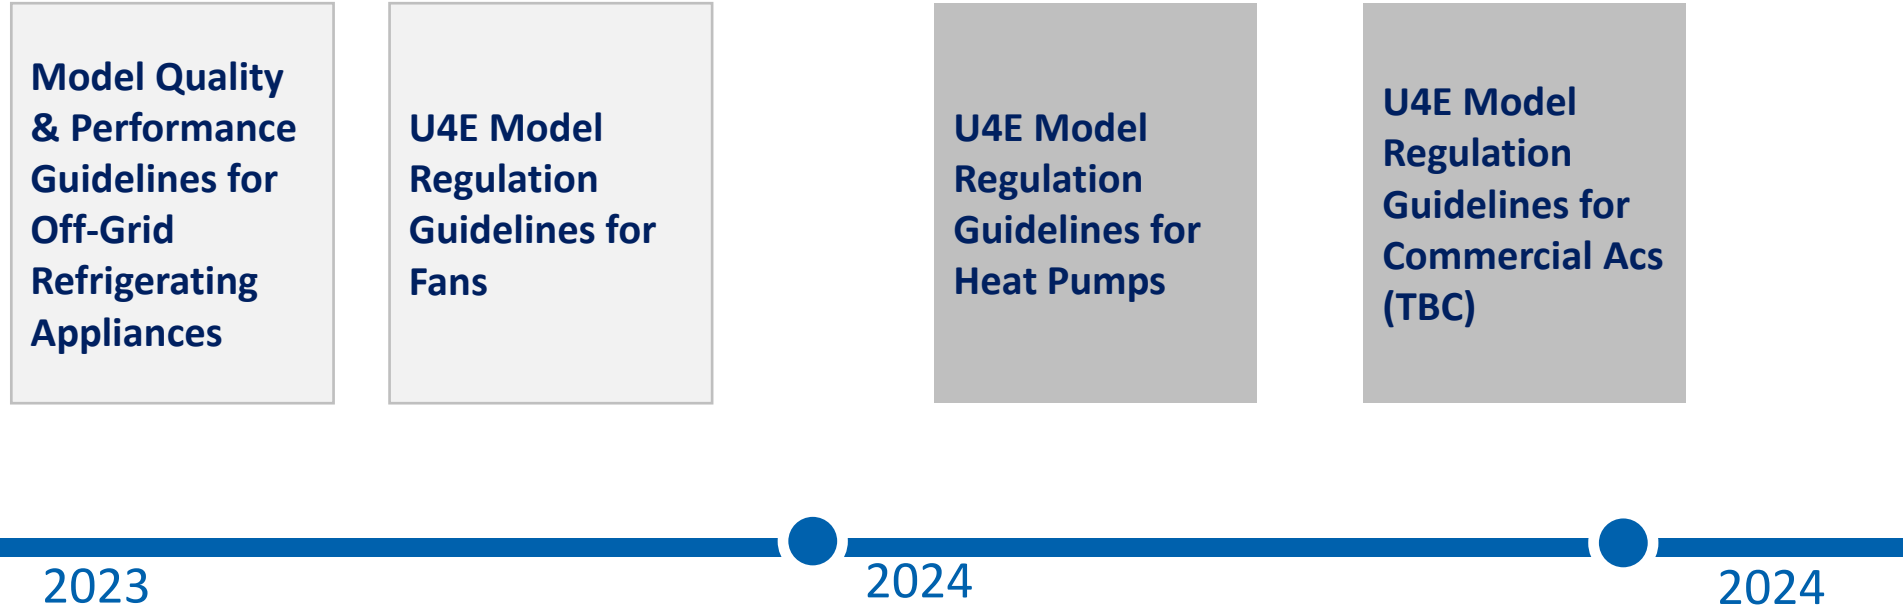

Various translations: English (all), Arabic, Spanish, Chinese, French, Portuguese

Available at: <https://united4efficiency.org/resources/model-regulation-guidelines/>

# U4E Model Regulation Guidelines

## Way forward

Expanding the portfolios of MRG appliances to **heat pumps, fans, water heaters, commercial air conditioners** (and/or update or expand existing Model Regulation guidelines) **in 2024 and beyond.**

# Roles and Responsibilities

## UNEP

- Champion the development and promotion of the model regulation
- Convene U4E partners and other experts to gather data and insights
- Final arbiter on content and methodology, informed by the collective input

## LBNL

- Selected to review best practices, develop methodology, conduct analysis, draft text
- Refine the content based on input received at regular junctures

## U4E Partners and Affiliates

- Provide data and insights for consideration in the model regulation
- If desired, endorse the model regulation and help promote its use

## Additional Experts

(country officials, other environmental / energy efficiency organisations)

- Provide feedback on the model regulation once the initial draft is ready
- If desired, adopt the model regulation and encourage others to do so

# Development Process

**Initial outreach**  
underway to secure  
first participants

**Dec 2020**

**Feb 2021**

Summary **background information** gathered at **inception meeting** (virtual)

**May-Jun 2021**

**Model Regulation Guidelines and Supporting Info Document** *drafted* (May) & reviewed by experts (June)

**July-Sep 2021**

*Updated & sent* (Aug. 19) & reviewed by more experts (begin Sep). Country Savings Assessments work getting underway

**Oct 2021 and beyond**

**Launch on November 4<sup>th</sup> at COP 26** and subsequent **promotion and capacity building** via webinars, high profile events (MOP33, UNSG HLD on Energy), workshops

# Commercial Refrigeration Equipment (CRE) Guidelines Content and Analysis

14:15-14:35 UTC

**Nihar Shah, Global Cooling Efficiency Program  
Lawrence Berkeley National Laboratory (LBNL)**

# Lawrence Berkeley National Laboratory

Managed by the University of California for  
the United States Department of Energy

Lawrence Berkeley  
National Laboratory

- Dedicated to solving the most pressing scientific problems facing humanity.
- More than three decades of work internationally on clean energy and climate policy, appliances, buildings, transport, industry, air quality with significant focus on energy efficiency.
- Technical support for Kigali Amendment negotiations.
- Technical support for market transformation programs on efficient air conditioners and refrigerators in various countries including China, India, Brazil, Mexico, Egypt, Indonesia, Rwanda, and United for Efficiency (U4E) “Model Regulation Guidelines”.

# U4E Model Regulation Guidelines for Cooling Equipment

Room Air  
Conditioners  
(2019)

Refrigerating  
Appliances  
(2019)

Commercial  
Refrigeration  
Equipment  
(2021)

## Simplify adoption and implementation of a robust regulation

- Target **energy-efficiency + lower-GWP refrigerants** simultaneously
- Encourage higher performing products through **labelling**
- Vary requirements to capture **climatic differences**
- Use proven **best practices** and tap into global policy and technology trends

- Intended as guidance to help **inform regulatory authorities and policy makers**
- Sets a **minimum efficiency floor** to prohibit future sales of inefficient products from the market.

# U4E Model Regulation Guidelines for Cooling Equipment

- U4E Guidelines reference global technology and policy trends.

# Global Commercial Refrigeration Equipment (CRE) Market

- **Commercial Refrigeration Equipment (CRE)** refers generally to non-domestic (non-household) refrigeration equipment used in retail and food service sectors for storage or display of foodstuffs.
  - **Refrigerated display cabinets (RDCs)** are estimated to account for the half of the global commercial refrigeration equipment market.
  - North America is the largest market in the world with a market value of US\$ 14 B, followed by Asia (where China and India are leading the growth) and Europe.

**Global CRE Market = US\$ 43.3 (in 2020)**

## CRE market share 'by type'

## CRE market 'by region'

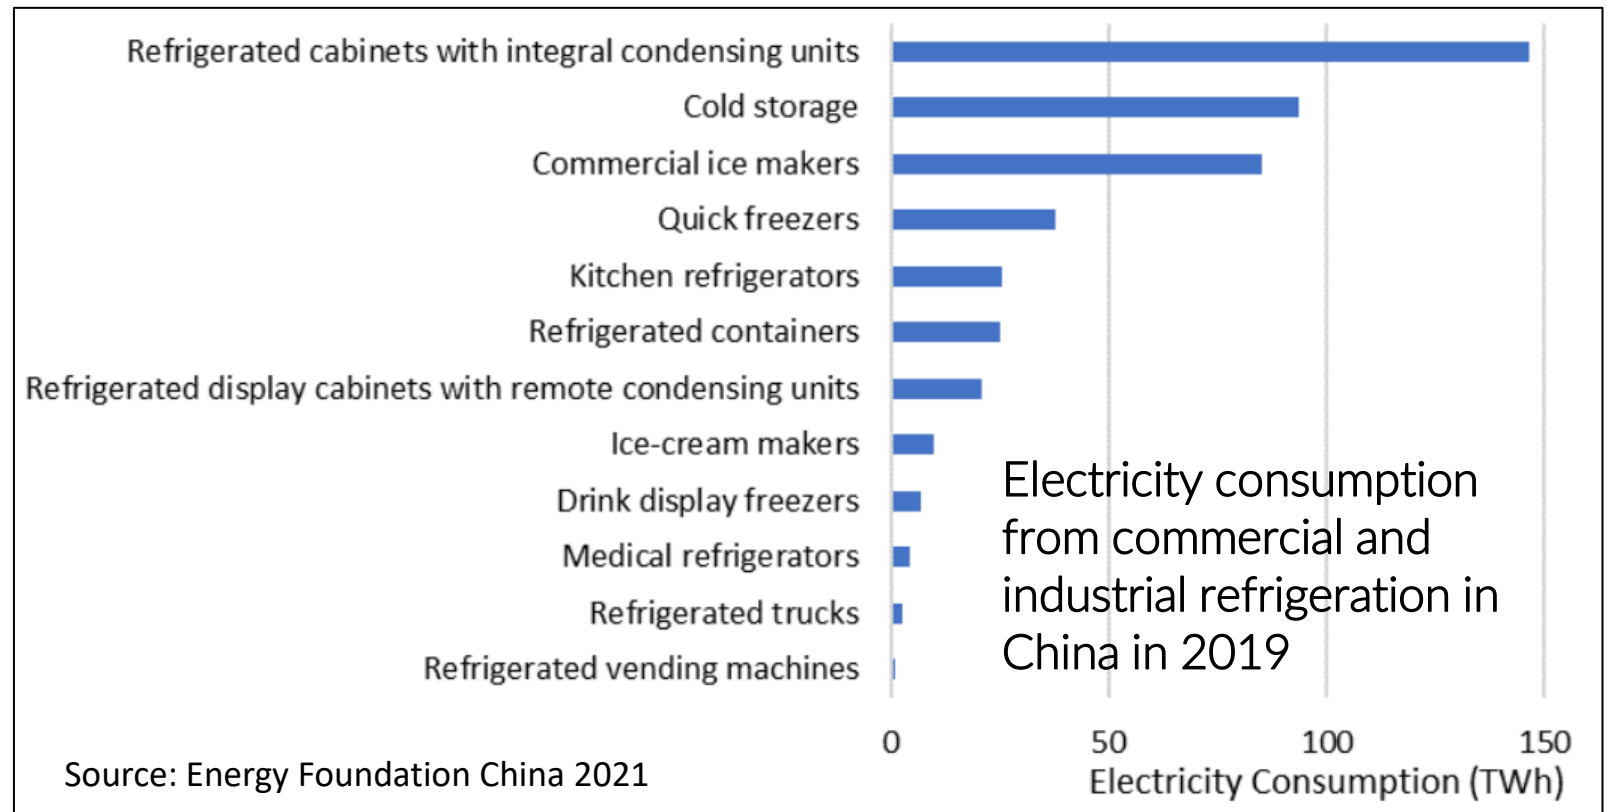

Source: Japan Air Conditioning, Heating & Refrigeration News (JARN) (2021)

# CRE Energy Consumption

- In China, of 29 selected cooling products analyzed, **commercial refrigerated cabinets with integral condensing units** were estimated to account for about 11% of the total cooling energy consumption in 2019.
- **Refrigerated cabinets with integral condensing units** were also identified to have the third-largest energy savings potential among key cooling products, after room air conditioners and variable refrigerant flow systems.

# CRE Products

- U4E Guidelines cover refrigerated display cabinets (RDCs), refrigerated storage cabinets (RSCs), and refrigerated vending machines (RVMs) that are generally regulated in leading economies.

Purpose	Condensing Unit	Configuration	Temperature	Reference Standard*
Display	Remote	Horizontal	Chilled	<ul style="list-style-type: none"> <li>• ISO 23953: 2015 (refrigerated display cabinets)</li> <li>• ISO 22044: 2021 (Beverage coolers)</li> <li>• ISO 22043: 2020 (ice-cream freezers)</li> <li>• EN 16838: 2016 (refrigerated display scooping cabinets for gelato)</li> </ul>

# CRE Products in Chile

Purpose	Condensing Unit	Configuration	Temperature	ISO 23953 Product Type
	Remote	Horizontal	Chilled	RHC1 - RHC8
			Frozen	RHF1, RHF3 - RHF7
		Vertical	Chilled	RVC1 – RVC4, RYC1 – RYC4
			Frozen	RVF1 – RVF4, RYF1 – RYF4
Display	Integral	Horizontal	Chilled	IHC1, IHC2, IHC3, IHC4, IHC5, IHC6, <b>IHC7</b> , IHC8
			Frozen	IHF1, IHF3, IHF4, IHF5, <b>IHF6</b> , <b>IHF7</b>
		Vertical	Chilled	IVC1, <b>IVC2</b> , IVC3, <b>IVC4</b> IYC1, IYC2, IYC3, IYC4
			Frozen	IVF1, IVF2, <b>IVF4</b> IYF1, IYF1, IYF4
Storage	Integral	Horizontal	Chilled	Covered by ISO 22041: 2019
			Frozen	
		Vertical	Chilled	
			Frozen	
Refrigerated Vending Machines				Covered by IEC 63252: 2020

- In Chile, there exists a database of integral RDCs, but information on product type is not fully available. Regardless, vertical chillers (VC), e.g., beverage coolers, and horizontal chillers/freezers appear to be popular.

Source: Cota Consultoría Spa

# An Approach to MEPS Development for CRE Products in Chile

- The first priority for MEPS development in Chile CRE is on **refrigerated display cabinets (RDCs) with integral condensing units, including beverage coolers and ice-cream freezers**, given that an energy efficiency certification program has been implemented with UNE-EN ISO 23953-2:2013.
- Other product types such as RSCs, RDCs with remote condensing units, RVMs can be considered in the following steps, based on an updated market assessment for those products and the experience from RDCs with integral condensing units.

# Test Conditions, Energy Efficiency Metrics and Requirements

- Compliance with the energy consumption requirements are recommended to be tested according to the conditions aligned with the U4E Guidelines and reference standards.

Equipment Class	AEC (kWh/yr)	RAEC (kWh/yr)	Package Temp Class	Test Room Climate Class	Reference Standard
RDC	$E_{daily} \times 365$	$(M + (N \times TDA)) \times 365$	M0, M, M1, M2, H1, H2, L1, L2, L3	3	ISO 23953: 2015 (under revision)
RDC-BC	$E_{daily} \times 365$	$(M + (N \times V_N)) \times 365$	M2	3	ISO 22044: 2021
RDC-ICF	$E_{daily} \times 365$	$(M + (N \times V_N)) \times 365$	C1, C2	4	ISO 22043: 2020

RDC: refrigerated display cabinet  
 BC: beverage cooler  
 ICF: ice cream freezer  
 TDA: total display area  
 Vn: net volume

Equipment category			Equipment class code	Low efficiency (high EEI)	Intermediate efficiency (intermediate EEI)	High efficiency (low EEI)	
RDC	Integral	Horizontal	Chiller	RDC-IHC	130	90	50
			Freezer	RDC-IHF	130	90	50
		Vertical	Chiller	RDC-IVC	130	90	50
			Freezer	RDC-IVF	130	90	50
	Beverage Cooler (BC)		Chiller	RDC-BC	100	70	40
	Ice-cream Freezer (ICF)		Freezer	RDC-ICF	100	70	50

$$EEI = \frac{AEC}{RAEC} \times 100$$

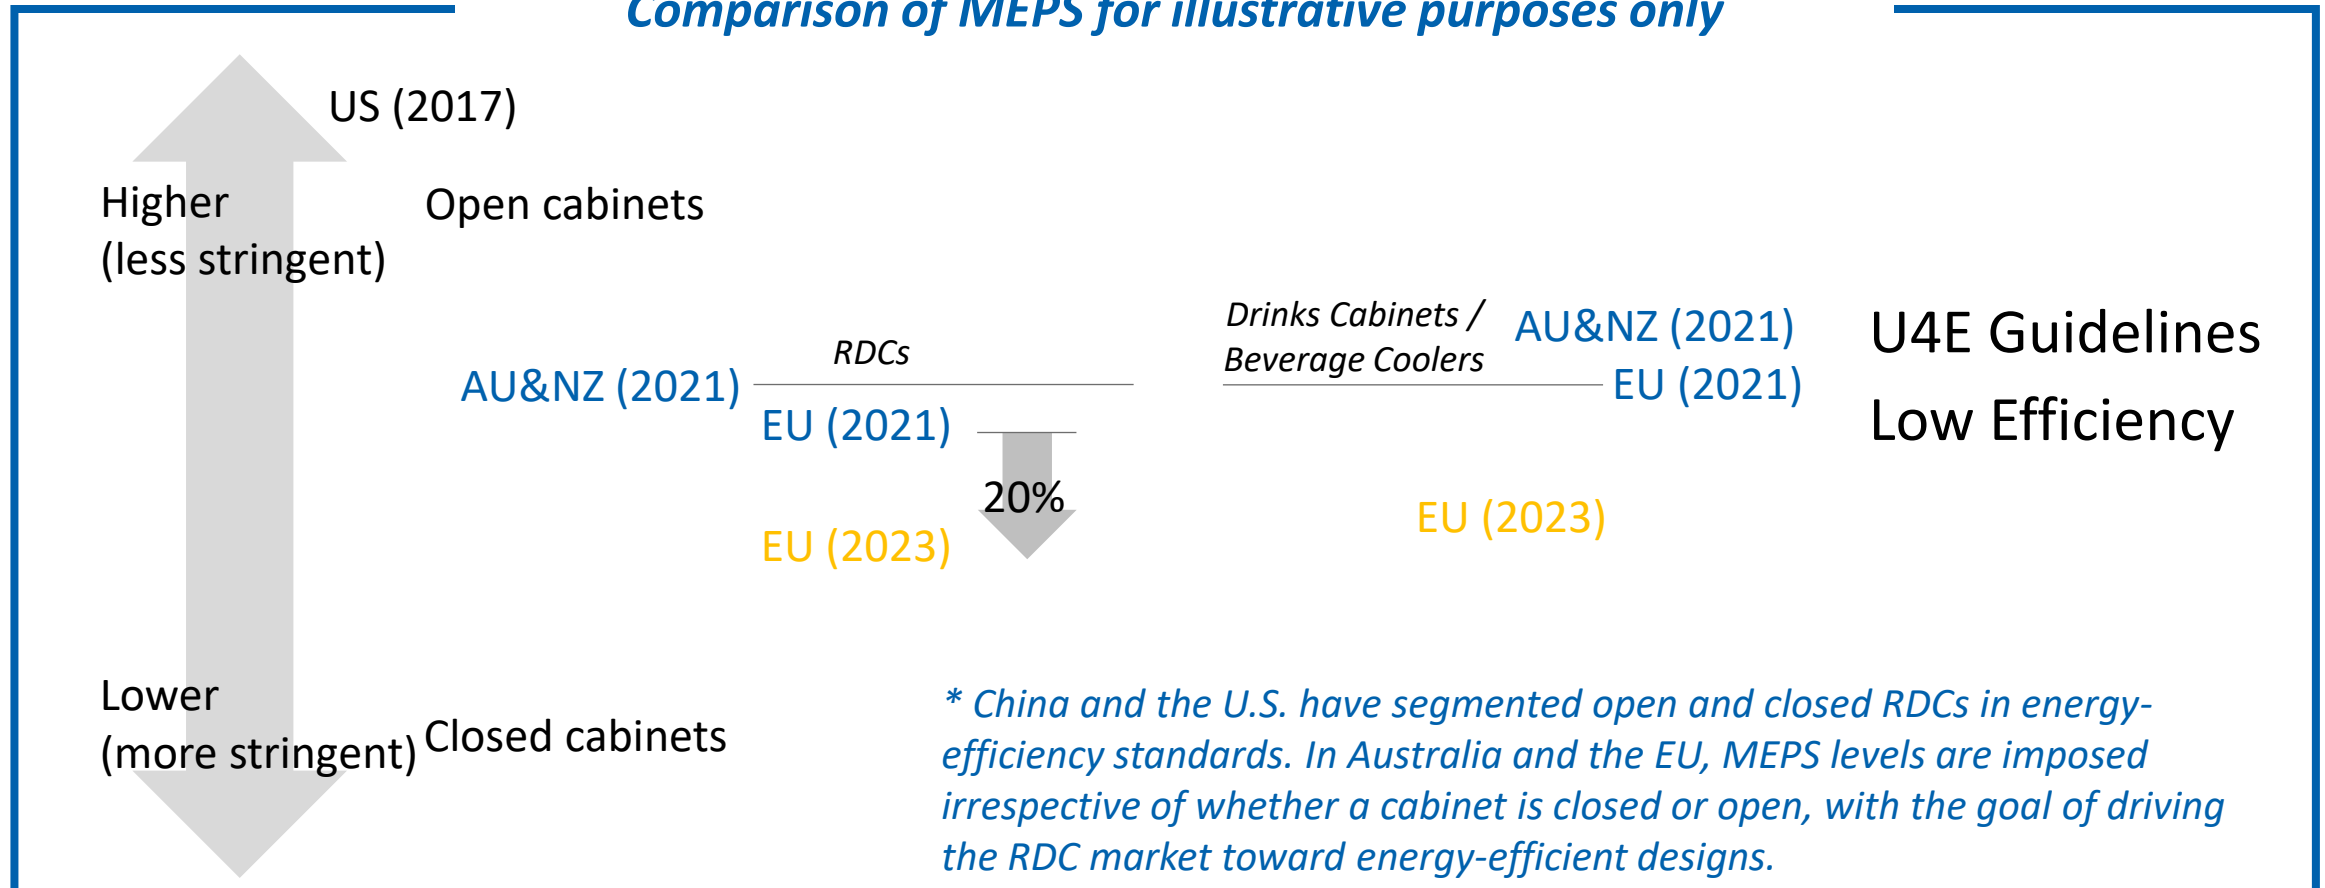

**AEC** is the equipment’s annual energy consumption, expressed in kWh per year.  
**RAEC** is the equipment’s reference annual energy consumption, expressed in kWh per year.

# Max Energy Consumption (Min Efficiency) Requirements

Approaches and EE levels in the U4E Model Regulation Guidelines are aligned with:

- AU 2021 (RDCs) and EU 2021 (RDCs) – Guidelines' low efficiency
- EU 2023 (RDCs), China 2021 draft, and US 2017 (closed cabinets) – Guidelines' intermediate or high efficiency

## Comparison of MEPS for illustrative purposes only

# Energy Efficient CRE Commercially Available

Based on the market data from Australia, China, EU and the US,

## RDCs

- Average energy consumption in RDCs is assessed to be lower by **9%-68%** than each regional MEPS.
- Most efficient systems consume lower energy by **23%-95%** than each regional MEPS.

## Beverage Coolers

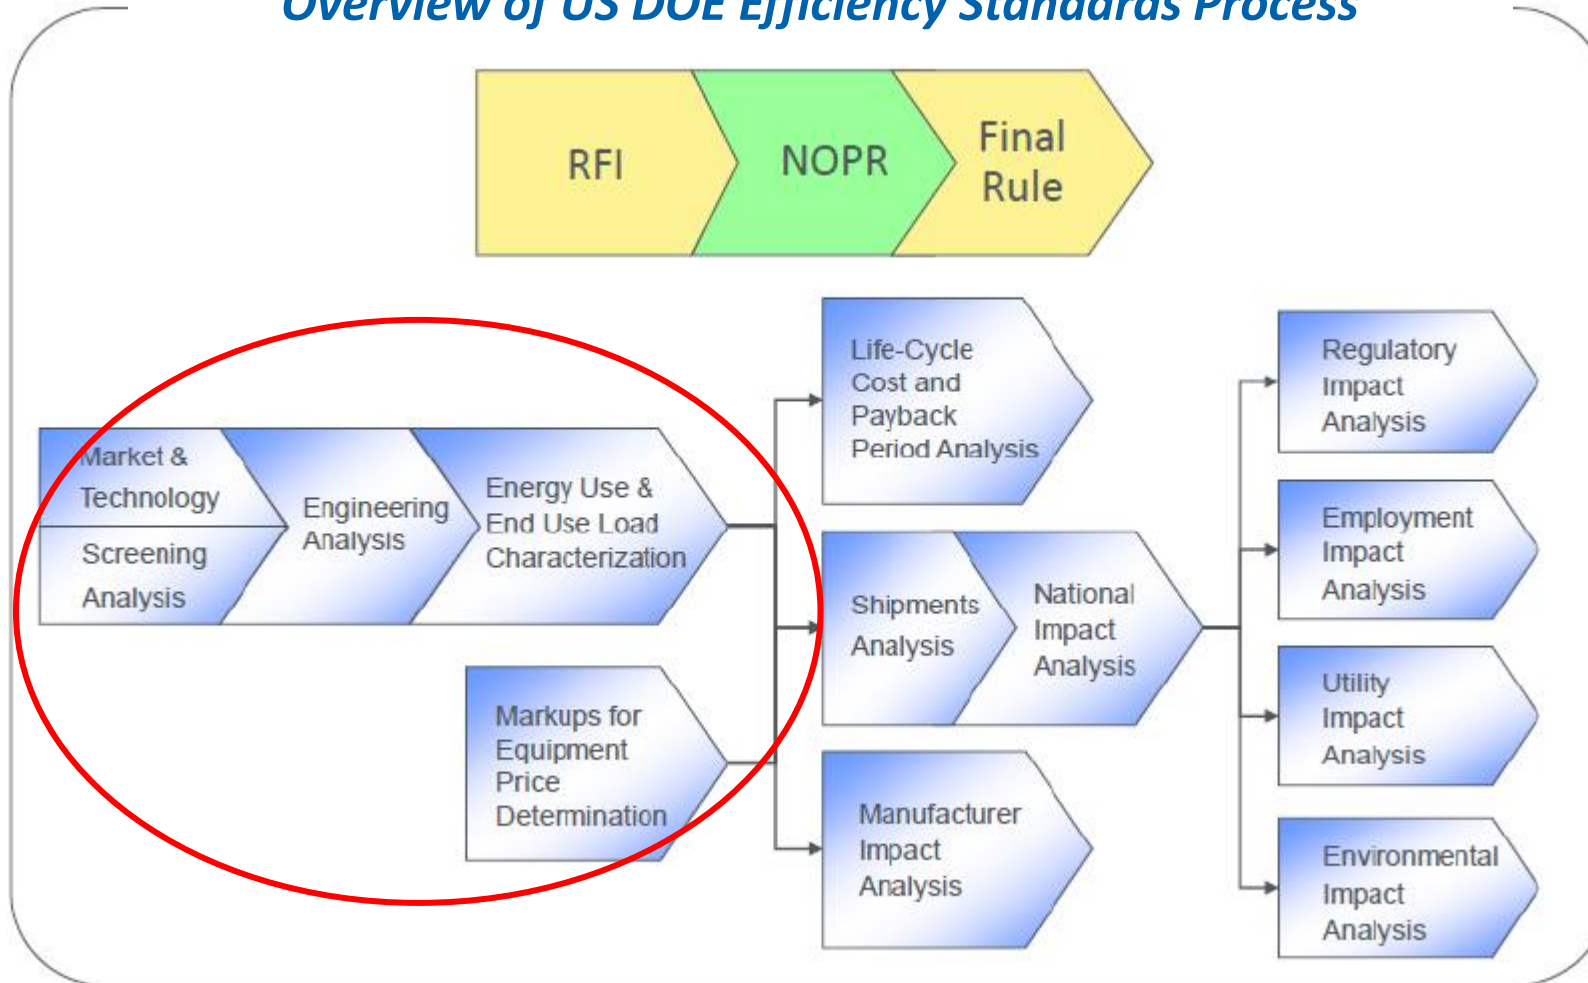

- Average energy consumption in beverage coolers is assessed to be lower by **35%-64%** than each regional MEPS.
- Most efficient systems consume lower energy by **71%-93%** than each regional MEPS.

# Cost-Efficiency Analysis

- It is essential to conduct analysis for determining whether a specific energy efficiency level is technically feasible and economically justified.

## Overview of US DOE Efficiency Standards Process

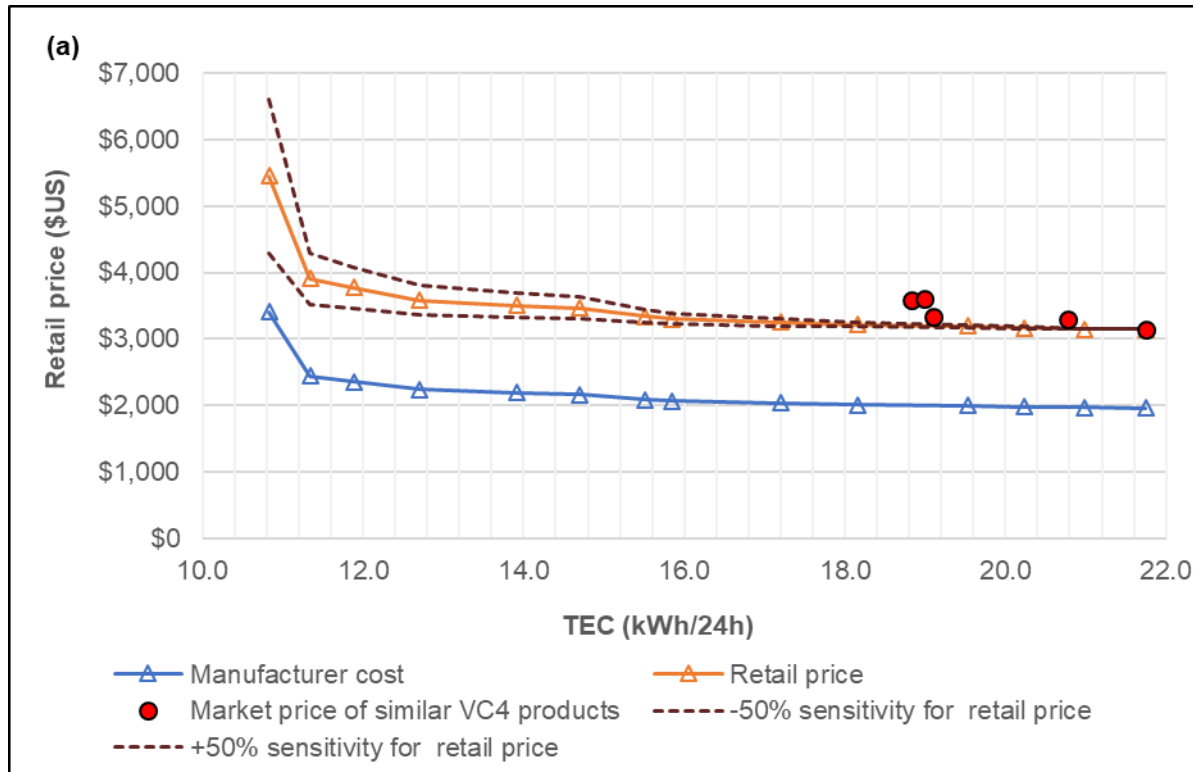

# Cost of Improving Efficiency Based on LBNL's Data

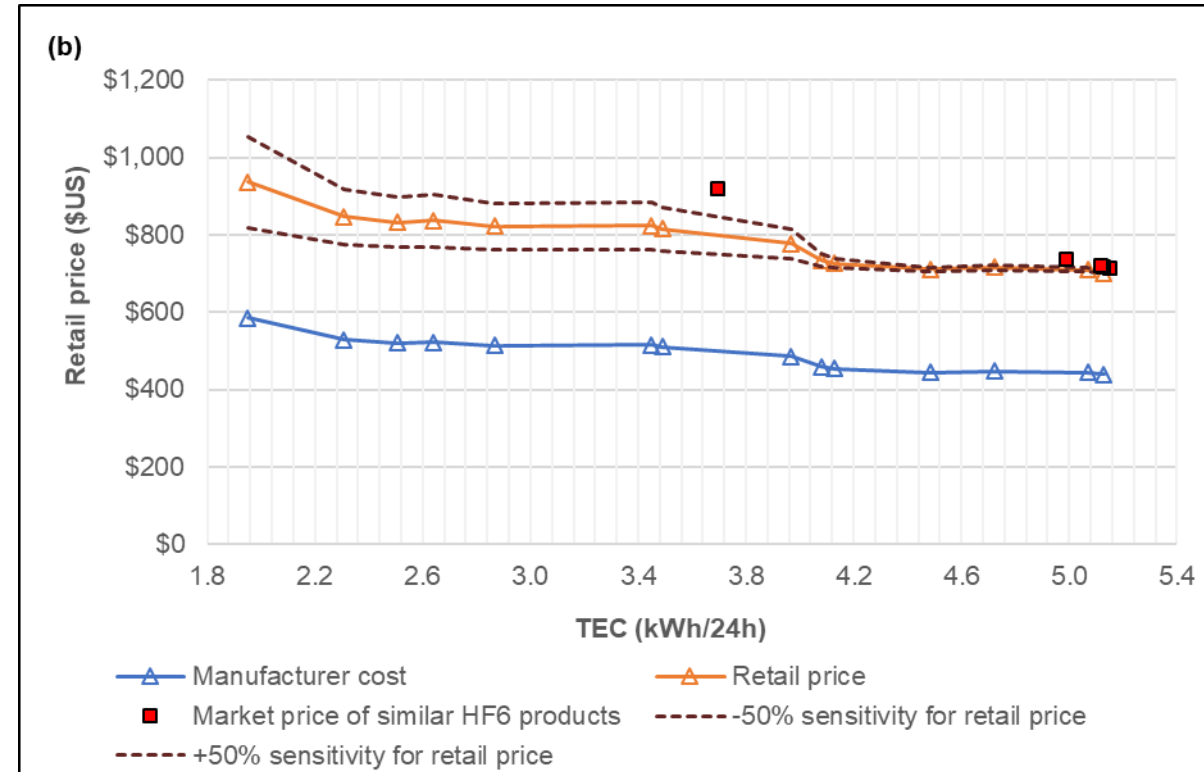

## Vertical integral chiller

- Vertical integral transparent door chiller systems (VC4): Improving the baseline energy consumption of 21.74 kWh/day to 12.71 kWh/day (~42% improvement) can be achieved at a price increase of about 14%.

## Horizontal integral freezer

- Horizontal integral transparent door freezer systems (HF6): Improving the baseline energy consumption of 5.13 kWh/day to 2.87 kWh/day (~44% improvement) can be achieved at a price increase of about 17%.

# CRE Energy Consumption in Chile – Vertical Chillers

- 45 vertical chiller (VC4) models identified in Chile are relatively small sizes, and appear to achieve energy consumption lower than the Guidelines intermediate or high efficiency requirements, comparable with similar products in the Australia and EU markets.

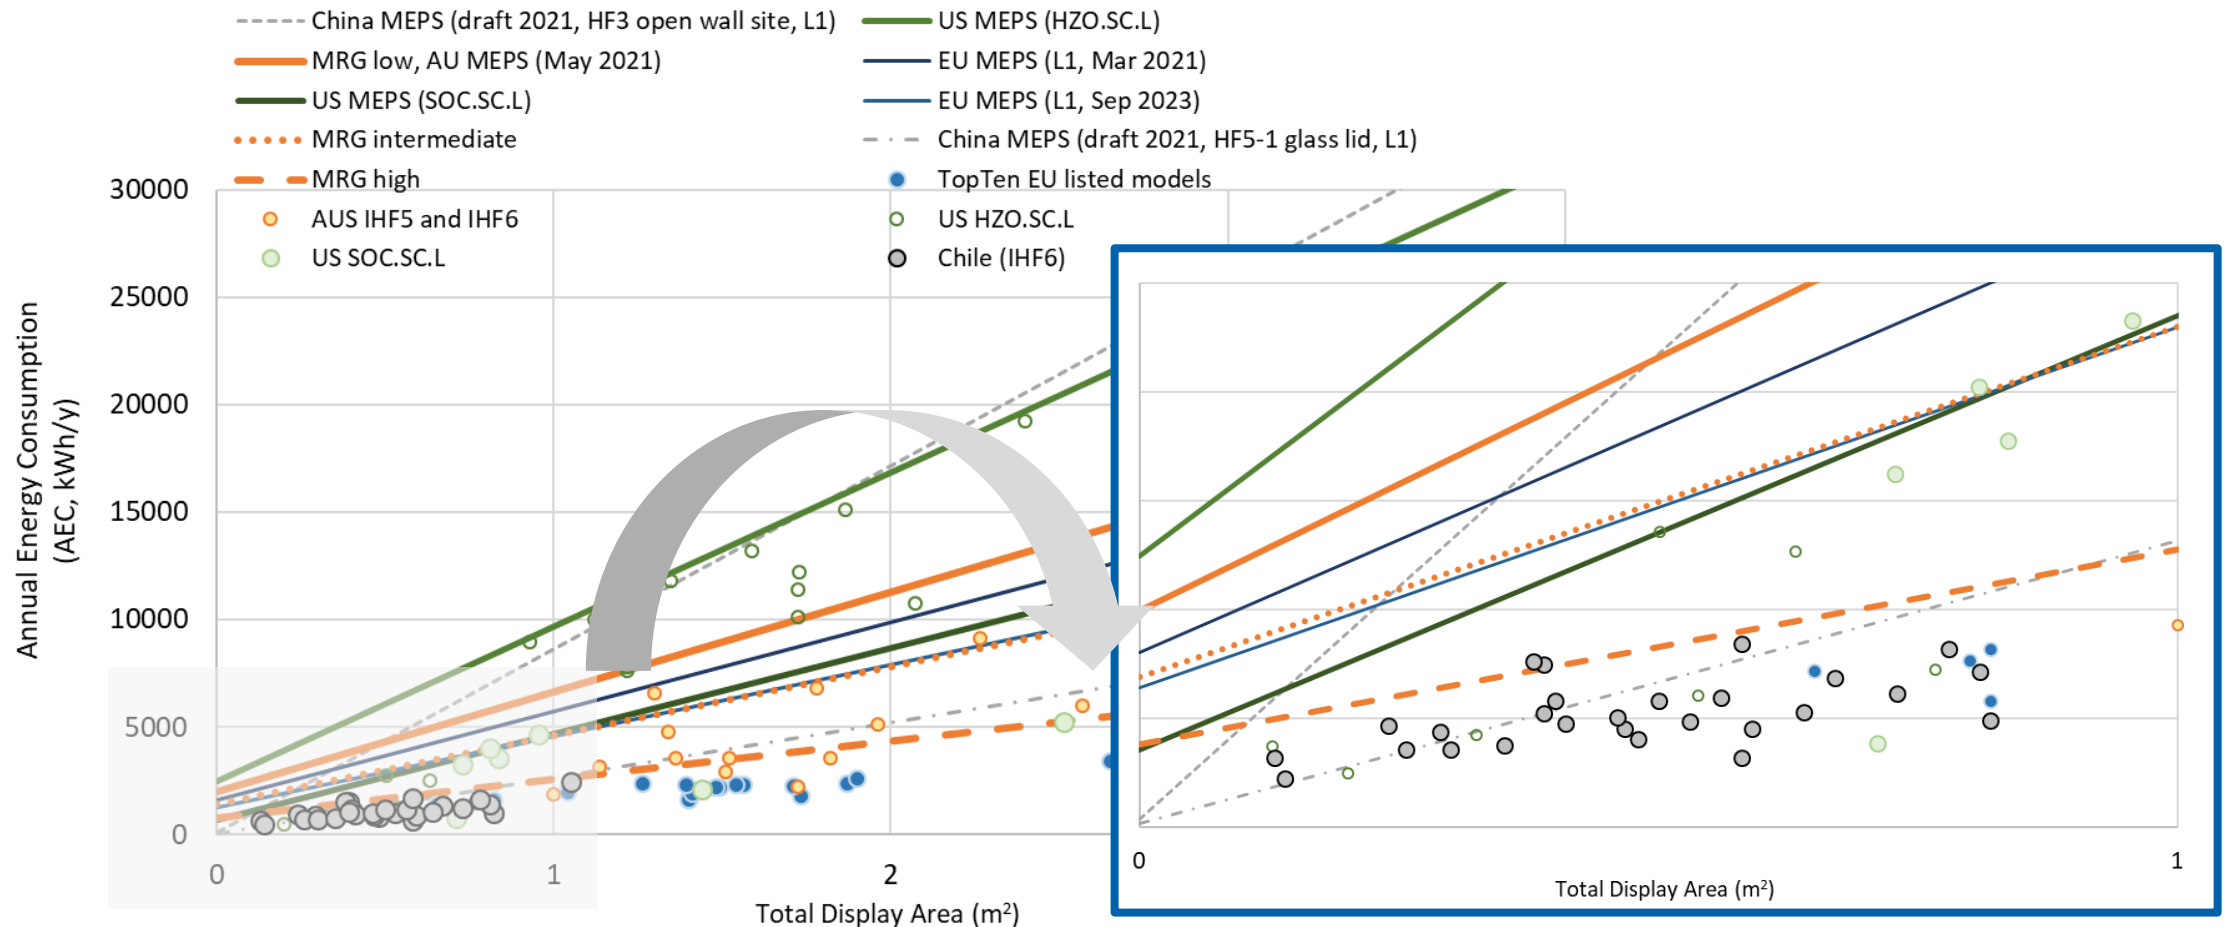

**RDC Integral Vertical Chillers**

# CRE Energy Consumption in Chile – Horizontal Freezers

- 28 horizontal freezer (HF6) models identified in Chile are relatively small sizes (likely closed cabinets), and appear to achieve energy consumption lower than the Guidelines intermediate or high efficiency requirements, comparable with similar products in the Australia, EU, and US markets.

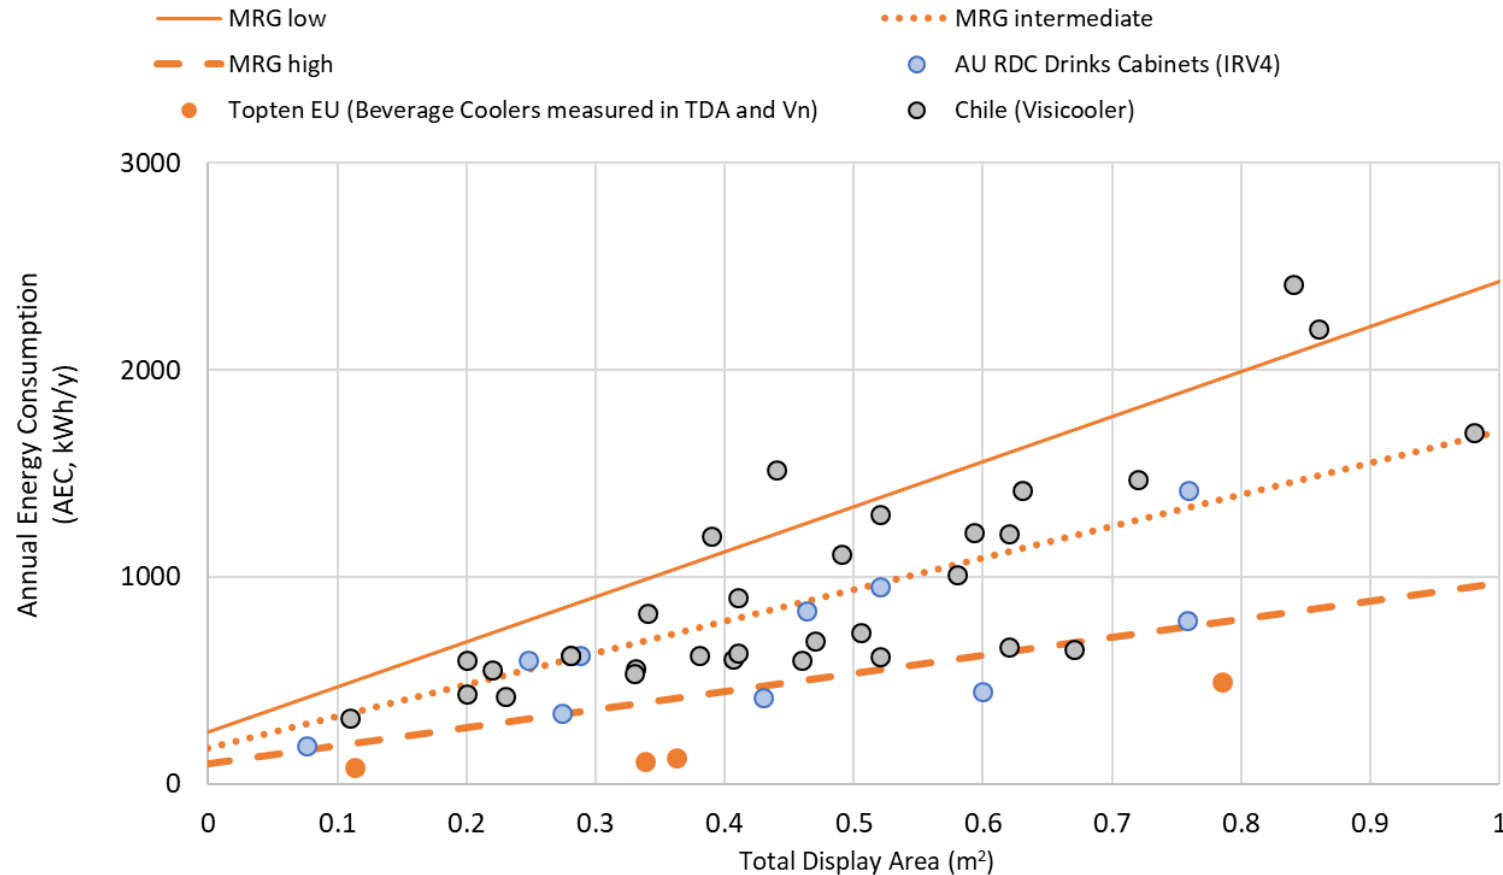

## RDC Integral Horizontal Freezers

# CRE Energy Consumption in Chile – Beverage Coolers

- Most of 33 beverage coolers (part of vertical chillers) identified in Chile appear to achieve energy consumption lower than the Guidelines low or intermediate efficiency requirements, comparable with similar products in the Australia market.

## RDC Beverage Coolers

# Refrigerants

Equipment class	GWP	ODP
All types	150	0

GWP values, flammability classifications, and operating pressures of the refrigerants used in commercial refrigeration and their proposed replacements

- The refrigeration industry is currently in the process of phasing-out hydrofluorocarbon (HFC)-based refrigerants due to their relatively high global warming potential (GWP).
- In Chile, although information on refrigerant type is not fully available, R290 and R600a are currently in use.

Source: Cota Consultoría Spa

# Summary of Findings

- Based on an initial cost-effectiveness analysis, improving the efficiency of selected product groups is cost-effective.
- Based on available market product data from Australia, EU and the U.S., the most efficient systems consume 61%-93% less energy (varying by product type) than each regional MEPS.
- Market data for Chile is not yet fully available. However, selected RDC types appear to achieve energy consumption below U4E Guidelines requirements, on par with similar products in the Australia, EU, and U.S. markets. This is true even considering some differences in how energy consumption is measured in UNE-EN ISO 23953-2:2013 (Chile) and ISO 23953: 2015 (Australia and the EU).
- Our cost-efficiency results indicate that Chile has a great opportunity to improve its CRE system efficiency using cost-effective technologies. With stringent MEPS levels, sufficient incentives, and robust regulatory programs such as labeling and procurement programs, high-efficiency CRE systems can be developed and deployed successfully in Chile.

# Initial Recommendations

1. Update the CRE product database by ensuring product and refrigerant types are specified for each registered model.
2. Consider adopting the latest version of ISO 23953 for RDCs, ISO 22043 for ice-cream freezers and ISO 22044 for beverage coolers. Adopting the latest international test standards would improve Chile's energy efficiency programs and facilitate consistency with international efforts.
3. Consider developing MEPS first for RDCs with integral condensing units, including beverage coolers and ice-cream freezers, given that an energy efficiency certification program has been implemented with UNE-EN ISO 23953-2:2013. Other product types such as RSCs, RDCs with remote condensing units, and refrigerated vending machines can be considered later, based on updated market assessments for those products and the experience gained by developing MEPS for RDCs with integral condensing units.
4. Consider MEPS for vertical chillers and horizontal freezers at the U4E "low" level. For beverage coolers, MEPS could be set at the U4E "intermediate" level based on an initial market and cost-efficiency analysis.
5. Consider adopting MEPS with low-GWP refrigerants, starting with RDCs with integral condensing units, including beverage coolers and ice-cream freezers, in alignment with the U4E Guidelines (which are largely consistent with other countries' practices).
6. Consider conducting a market assessment for other CRE products before establishing MEPS and energy-efficiency programs.

# Chile's Ongoing Process on Setting MEPS for CRE and Leveraging the U4E Guidelines

14:50-15:00 UTC

**Isaac Saez Alfaro, National Consultant Chile, UNIDO**

# OBJECTIVES

The project considers the following general objectives:

- Develop national MEPS for refrigerated display counters and guidelines that will include best practices for cold rooms.
- Raise awareness of both end users and refrigeration technicians about the impact of the use of RAC equipment.
- Test the energy efficiency measures developed on a pilot scale.

# PARTICIPATING NATIONAL ENTITIES

- **Ministry of Environment:** Is the state body in charge of the design and application of policies, plans, and programs in environmental matters
- **Ministry of Energy:** It is the Government institution responsible for preparing and coordinating the plans, policies, and standards for the development of the energy sector.
- **Superintendency of Electricity and Fuels (SEC):** In charge of the elaboration of the test protocols, of authorizing the laboratories and certification bodies in the country.

# ACTIVITIES TO DATE

## A. COTA Consultancy study “Promoting energy efficiency of cold rooms - cold chambers and refrigerated display counters in Chile”

- A characterization of the Chilean market for refrigerated display counters and cold rooms was carried out through interviews with entities participating in the commercial refrigeration market in Chile, as well as information provided by the SEC.
- The information on the refrigerated display case market served as the basis for the study conducted by LBNL.

## B. Project launching workshop, the result of COTA's study.

- The workshop was successfully carried out, with the participation and broad interest of the entities that make up the commercial refrigerated display counters market in Chile.

# ACTIVITIES TO DATE

## C. Preparation of MEPS for refrigerated display counters.

- Using as a central axis what was developed by LBLN that considers the U4E Model Regulation Guidelines, a document with the official format of the Chilean Ministry of Energy is being prepared to be sent later for public consultation.

## D. Elaboration of guidelines for refrigeration chambers

- Informative guides are being developed, based on international standards and experiences, to establish best practices in the construction, start-up, operation and maintenance of cold rooms.
- Adapt and implement the “Zero Leakage” program in Chile.

# PILOTS

- Informative workshops and face-to-face or videocall interviews are being arranged with entities participating in the national commercial refrigeration market. The objective of these workshops is to raise awareness participants on the progress and proposals to date, while beginning to select potential candidates for the pilot projects.
- The selection criteria for the pilot companies will be defined.
- Once the pilots are selected, improvements related to technologies, efficient methods of use, best practices, among others, will be applied and the cases will be studied.

# SHORT-TERM ACTIONS

- Continue discussing the results obtained by LBNL regarding the MEPS and the recommendations they provide in the same document.
- Finalize guidelines for best practices in cold rooms.
- Start with workshops to raise awareness about the proposals.
- Identify the four pilot projects to demonstrate the application of the guidelines in two cold rooms and the minimum standards in two refrigerated display counters.

# Q&A Session

**Clean Cooling**  
COLLABORATIVE

# Closing Reflections on Next Steps for the Guidelines

15:25-15:30 UTC

**Dr. Tao Wang, Clean Cooling Collaborative**

# Thank you
